INTRODUCTION

The International Maritime Organisation (IMO) is a specialised agency established by the United Nations in 1948 to deal the safety of life at sea and pollution prevention.

Since its establishment, the IMO has adopted nearly 50 conventions, numerous protocols and amendments, and well over 800 codes and recommendations, covering a wide range of subjects. It is sufficient to mention SOLAS, MARPOL and Load Line Conventions to illustrate the importance of the IMO in worldwide maritime activities.

In addition, the IMO has developed a number of amendments to existing instruments.

RINA has always taken an active role in the IMO technical subcommittees, the Maritime Safety Committee (MSC) and the Marine Environment Protection Committee (MEPC).

This publication contains a summary of the mandatory requirements adopted by IMO (e.g. amendments to SOLAS, MARPOL and other IMO conventions and codes) up to and including those adopted in July 2023 at MEPC 80, entering into force between 2022 and 2030, listed in chronological order with respect to their application date. Adopted mandatory instruments for which dates of entry into force have yet to be established, have also been included.

Reference to the previous editions of this publication should be made for mandatory requirements that entered into force prior to 1 January 2022.

Three different indexes have been inserted to help readers to better identify the requirements of interest to them:

- 1. a chronological index with respect to the application date of the requirements;
- 2. an alphabetical index with respect to the IMO mandatory instruments; and
- 3. a ship-type index, for new and existing ships respectively, showing the requirements applicable to each ship type at a given date.

NOTICE AND TERMS OF USE

The Regulations mentioned in this publication are briefly summarised and not integrally reported.

Any person who applies them should refer to the original text of the referenced IMO documents.

RINA shall not be held liable or responsible for any inaccuracy or omission.

NOTES

- **Ship-type index**: the numbers and letters shown in the ship-type index correspond to the set of requirements described in Part 1 (the numbers) and Part 2 (the letters).
- All ships: include all ship types other than high speed craft and other ships.
- High speed craft: includes both passenger and cargo high speed craft.
- **Other ships:** includes fixed and floating platforms, FPSOs (floating production, storage and offloading facilities), FSUs (floating storage units), mobile offshore drilling units, stationary vessels, nuclear passenger and cargo ships, fishing vessels, livestock carriers.
- Constructed: means keel laid.
- **Application scheme**: when requirements apply to new ships according to the following scheme:
 - i. for which the building contract is placed on or after [date XXX]; or
 - ii. in the absence of a building contract, the keel of which is laid on or after [date YYY]; or
 - iii. the delivery of which is on or after [date ZZZ]

IMO Circular MSC-MEPC.5/Circ.8 clarifies that the requirements are to be applied as follows:

.1 if a building contract signing date occurs on or after date XXX, then, those requirements apply;

.2 only in the absence of a building contract does the keel laying date criteria apply and, if a ship's keel laying date occurs on or after date YYY, then, those requirements apply; and

.3 regardless of the building contract signing date or keel laying date, if a ship's delivery date occurs on or after date ZZZ, then, those requirements apply except in the case where the Administration has accepted that the delivery of the ships was delayed due to unforeseen circumstances beyond the control of the shipbuilder and the owner (refer to Unified Interpretation of "Unforeseen delay in the delivery of ships" in MSC.1/Circ.1247 and MARPOL Annex I, Unified Interpretation 4). The delivery means the completion date (day, month and year) of the survey on which the certificate is based (i.e. the initial survey before the ship is put into service and certificate issued for the first time) as entered on the relevant statutory certificates.

The date on which the building contract is placed for optional ships should be interpreted to be the date on which the original building contract to construct the series of ships is signed between the ship owner and the shipbuilder provided:

.1 the option for construction of the optional ship(s) is ultimately exercised within the period of one year after the date of the original building contract for the series of ships; and

.2 the optional ships are of the same design plans and constructed by the same shipbuilder as that for the series of ships.

LEGEND

2017 Amendments

The amendments adopted by Resolution MSC.421(98) on 15 June 2017, introduce, inter alia, modifications to SOLAS Chapter II-1 applicable to the following ships:

PART 1

MANDATORY REQUIREMENTS ENTERING INTO FORCE BETWEEN 2022 AND 2030

2022

1 April 2022

MARPOL 73/78

2020 Amendments to the revised Annex VI "Regulations for the prevention of air pollution from ships"

The amendments adopted by Resolution MEPC.324(75) on 20 November 2020 modify MARPOL Annex VI as follows:

	1.	Regulation 1 "Definitions", adding:	NA
		 "Sulphur content of fuel oil" (i.e. the concentration of sulphur in a fuel oil, measured in % m/m as tested in accordance with a standard acceptable to the Organization – reference is made to ISO 8754:2003); 	
		 "Low-flashpoint fuel" (i.e. gaseous or liquid fuel oil having a flashpoint lower than otherwise permitted under para. 2.1.1 of SOLAS Regulation II-2/4); 	
		 "MARPOL delivered sample" (i.e. the sample of fuel oil delivered in accordance with MARPOL Annex VI Reg.18.8.1); 	
		 "In-use sample" (i.e. sample of fuel oil in use on a ship); and 	
		 "On board sample" (i.e. sample of fuel oil intended to be used or carried for use on board that ship). 	
1	2.	Regulation 14 "Sulphur oxides (SOX) and particulate matter", requiring sampling point(s) to be fitted or designated on ships constructed on or after 1 April 2022 for taking representative samples for the "in-use" fuel.	All ships/ Constructed on or after 1 April 2022
		Existing ships (i.e. ships constructed before 1 April 2022) shall comply with this requirement not later than the first renewal survey of the IAPP Certificate on or after 1 April 2023. The requirement is not applicable to a fuel oil service system for a low-flashpoint fuel for combustion purposes for propulsion or operation on board the ship.	

		Reference should be made to the following Guidelines:	
		 2019 Guidelines for on board sampling for the verification of the sulphur content of the fuel oil used on board ships (MEPC.1/Circ.864/Rev.1); and 	
		 2020 Guidelines for on board sampling of fuel oil intended to be used or carried for use on board a ship (MEPC.1/Circ.889). 	
	3.	Regulation 18 "Fuel oil availability and quality", requiring that the representative sample is to be analysed in accordance with the verification procedure set forth in Appendix VI to the Annex.	NA
	4.	Regulation 20 "Attained Energy Efficiency Design Index (attained EEDI)", requiring the Administration or any recognised organization shall report to the IMO the required and attained EEDI values and relevant information, via electronic communication:	NA
		 within seven months of completing the survey for ship delivered on or after 1 April 2022; or 	
		 within 7 months following 1 April 2022, for ships delivered prior to 1 April 2022." 	
2	5.	Regulation 21 "Required EEDI", anticipating Phase 3 from 1 January 2025 to 1 April 2022 for gas carriers; containerships; general cargo ships; LNG carriers; cruise passenger ships having non-conventional propulsion, with the reduction factors included in Table1.	Gas carrier, containership General cargo, LNG carrier, cruise passenger ships having non- conventional propulsion/ Contracted on or after 1 April 2022
3	6.	Supplement to International Air Pollution Prevention Certificate (IAPP Certificate), adding two para.s:	All ships/ New and
		 "2.3.4 The ship is fitted with designated sampling point(s) in accordance with regulation 14.10 or 14.11"; 	CAISUNG
		- "2.3.5 In accordance with regulation 14.12, the requirement for fitting or designating sampling point(s) in accordance with regulation 14.10 or 14.11 is not applicable for a fuel oil service system for a low-flashpoint fuel for combustion purposes for propulsion or operation on board the ship".	
	7.	Appendix VI "Fuel verification procedure for MARPOL Annex VI fuel oil samples (regulation 18.8.2)", including	
		 Part 1 – sample of fuel oil delivered; 	
		 Part 2 – sample of fuel oil in use. 	

1 June 2022

IMDG CODE (INTERNATIONAL MARITIME DANGEROUS GOODS)

2020 Amendments

The amendments, adopted by Resolution MSC.477(102) on 11 November 2020 include, inter alia, the following:

4	 the assignment of alcoholates (i.e. UN 1289 SODIUM METHYLATE SOLUTION, UN 1431 SODIUM METHYLATE, UN 3206 ALKALI METAL ALCOHOLATES, SELF-HEATING, CORROSIVE N.O.S. and UN 3274 ALCOHOLATES SOLUTION N.O.S) to the segregation group of alkalis (SGG18); 	All ships carrying dangerous goods/ New and existing
	 modifications to segregation provision (SG53) to read "Shall not be stowed together with combustible material in the same cargo transport unit"; 	existing
	 new requirements (section 5.5.4.1) for dangerous goods (e.g. lithium batteries, fuel cell cartridges) contained in equipment such as cargo data loggers and tracking device attached to or placed in packages, overpacks, containers or load compartments; 	
	 updated the Dangerous Goods List, clarifying – inter alia - that UN 1361 CARBON includes charcoal, known as "carbon blacks, other nonactivated carbon materials and charcoal produced from materials such as bone, bamboo, coconut shell, jute and wood"; 	
	 new special provision SP975 MEDICAL WASTE, CATEGORY A, AFFECTING HUMANS, solid or MEDICAL WASTE, CATEGORY A, AFFECTING ANIMALS. 	
	In line with the amendments to the IMDG Code, the Emergency Response Procedures for Ships Carrying Dangerous Goods (EmS Guide) has been completely revised and issued by MSC.1/Circ.1588/Rev.1. Such circular was superseded by MSC.1/Circ.1588/Rev.2.	

BWM CONVENTION (INTERNATIONAL CONVENTION FOR THE CONTROL AND MANAGEMENT OF SHIPS' BALLAST WATER AND SEDIMENTS)

2020 Amendments

The amendments adopted by Resolution MEPC.325(75) on 20 November 2020 include the following:

5	1.	Regulation E-1 "Surveys", requiring a commissioning test to be conducted to validate the installation of any ballast water management system by demonstrating that its mechanical, physical, chemical and biological processes are working properly, taking into account the Guidance for the commissioning testing of ballast water management systems, issued by BWM.2/Circ.70/Rev.1.	All ships/ New and existing
	2.	Appendix I "Form of International Ballast Water Management Certificate", modifying:	
		 The footnote of "IMO Number" under the item "Particulars of ship" is replaced by the following: 	
		"IMO Ship Identification Number Scheme adopted by the Organization by resolution A.1117(30), as amended."	
		 The text under the title "Details of ballast water management method(s) used" is replaced by the following: 	
		"Method of ballast water management used	
		Date installed (if applicable) (dd/mm/yyyy) Name of manufacturer (if applicable)	
		The principal ballast water management method(s) employed on this ship is/are:	
		 in accordance with regulation D-1 in accordance with regulation D-2 (describe) the ship is subject to regulation D-4 other approach in accordance with regulation	

1 November 2022

MARPOL 73/78

2021 Amendments to Annex I "Regulations for the prevention of pollution by oil"

The amendments, adopted by Resolutions MEPC.329(76) and MEPC.330(76) on 17 June 2021 include modifications to the following:

6	Regulation 3, allowing unmanned non-self-propelled (UNSP) barges – defined as a barge which is not propelled by mechanical means; carries no oil; has no machinery fitted that may use oil or generate oil residue (sludge); has no oil fuel tank, lubricating oil tank, oily bilge water holding tank and oil residue (sludge) tank; and has neither persons nor living animals on board - to be exempted from survey and certification requirements under MARPOL Annex I for periods not exceeding 5 years.	UNSP barges/ New and existing
	The specific guidance for flag States, port States and interested parties - including shipowners and operators - on the application of such exemption for UNSP barges (MEPC.1/Circ.892) clarifies:	
	 the technical and operational requirements not applicable to UNSP barges; 	
	 procedures for granting exemptions; 	
	 maintenance of conditions after survey; and 	
	 pushing and towing. 	
	The Form of Exemption Certificate for UNSP Barges is included in Appendix IV.	
	New Regulation 43A "Special requirements for the use and carriage of oils as fuel in Arctic waters", banning - on and after 1 July 2024 - the use and carriage in Arctic waters of the oils, other than crude oils, having a density at 15°C higher than 900 kg/m ³ or a kinematic viscosity at 50°C higher than 180 mm ² /s.	NA
	A five-year delay in the implementation of such ban (i.e. 1 July 2029) is granted for vessels that already comply with MARPOL Annex I Reg. 12A or with Reg. 1.2.1 of the Polar Code, as these ships have existing fuel tank protections that reduce the risk of fuel oil spills	

2021 Amendments to the revised Annex IV "Regulations for the prevention of pollution by sewage from ships"

The amendments adopted by Resolution MEPC.330(76) on 17 June 2021 include modifications to the following:

7	Regulation 3, allowing unmanned non-self-propelled (UNSP) barges	UNSP
	- defined as a barge that is not propelled by mechanical means; has	barges/
	neither persons nor living animals on board; is not used for holding	New and

sewage during transport; and has no arrangements that could produce sewage - to be exempted from survey and certification requirements under MARPOL Annex IV for periods not exceeding 5 years.	existing
The specific guidance for flag States, port States and interested parties - including shipowners and operators - on the application of such exemption for UNSP barges (MEPC.1/Circ.892) clarifies:	
 the technical and operational requirements not applicable to UNSP barges; 	
 procedures for granting exemptions; 	
 maintenance of conditions after survey; and 	
 pushing and towing. 	
The Form of Exemption Certificate for UNSP Barges is included in Appendix II.	

2021 Revised MARPOL Annex VI "Regulations for the prevention of air pollution from ships"

Resolution MEPC.328(76) adopted new Revised MARPOL Annex VI which includes modifications to the following:

8	 Regulation 3 "Exceptions and exemptions", allowing unmanned non-self-propelled (UNSP) barges – defined as barge that is not propelled by mechanical means; has no system, equipment and/or machinery fitted that may generate emissions regulated by this Annex; and has neither persons nor living animals on board - to be exempted from survey and certification requirements under MARPOL Annex VI for periods not exceeding 5 years. 	UNSP barges/ New and existing
	The specific guidance for flag States, port States and interested parties - including shipowners and operators - on the application of such exemption for UNSP barges (MEPC.1/Circ.892) clarifies:	
	 the technical and operational requirements not applicable to UNSP barges; 	
	 procedures for granting exemptions; 	
	 maintenance of conditions after survey; and 	
	 pushing and towing. 	
9	2. Regulation 5 "Surveys", requiring	Ships of
	 ships of 5000 GT to which Regulation 26 applies (see bullet No. 8 below) to: 	which Reg. 26 applies/
	 have SEEMP Part III verifed prior to 1 January 2023; 	New and
	 have a Confirmation of Compliance onboard (sample format annexed to Res. MEPC.347(78)); and 	existing
	 ships of 400 GT to which Regulations 23 and 25 apply (see bullets No. 6 and 7 below) to have the attained EEXI verified - in accordance with the requirements in Regulations 23 and 25 at the first annual, intermediate or renewal survey of the IAPP or the initial survey of the IECC Certificate, whichever is 	NA

		the first, on or after 1 January 2023.	
	3.	Regulation 6 "Issue or endorsement of Certificates and Statements of Compliance related to fuel oil consumption reporting and operational carbon intensity rating", requiring the Administration to:	
		 verify that the attained annual operational Carbon Intensity Indicator (CII) reported, is based on the data submitted; 	
		 based on the verified attained annual operational CII, determine the operational carbon intensity rating of the ship; and 	
10		 issue a Statement of Compliance related to fuel oil consumption reporting and operational carbon intensity rating to the ship no later than five months from the beginning of the calendar year. 	Ships of 5000 GT/ New and existing
	4.	Regulation 8 "Form of Certificates and Statements of Compliance related to fuel oil consumption reporting and operational carbon intensity rating", making reference to the format of:	
		 the Statement of Compliance related to fuel oil consumption reporting and operational carbon intensity rating (Appendix X); and 	
11		 the International Air Pollution Prevention Exemption Certificate for Unmanned Non-self-propelled Barges (Appendix XI). 	UNSP barges/ New and existing
12	5.	Regulation 9 "Duration and validity of Certificates and Statements of Compliance related to fuel oil consumption reporting and operational carbon intensity rating", specifying the validity period of the Statement of Compliance:	Ships of 5000 GT/ New and existing
		 the Statement of Compliance shall be valid for the calendar year in which it is issued and for the first five months of the following calendar year; 	
		 in case of transfer, the Statement of Compliance shall be valid for the calendar year in which it is issued, for the following year, and for the first five months of the subsequent calendar year. 	
		All Statements of Compliace shall be kept on board for at least five years.	
	6.	Regulation 23 "Attained Energy Efficiency Existing Ship Index (Attained EEXI)", requiring bulk carriers, combination carriers, containerships, cruise passenger ships having non-conventional propulsion, gas carriers, general cargo ships, LNG carriers, refrigerated cargo carriers, ro-ro cargo ships, ro-ro cargo ships (vehicle carrier), ro-ro passenger ships and tankers of 400 GT and above engaged in international voyages, to calculate the Attained EEXI.	NA
		The Attained EEXI shall be calculated taking into account the 2022 IMO Guidelines adopted by Res. MEPC.350(78).	
1	1	For mose ships already having a verified Attained EEDI, this	

value may be taken as the Attained EEXI if it is equal to or less than the Required EEXI. In this case, the Attained EEXI shall be verified based on the EEDI Technical File. 7. Regulation 25 "Required EEXI", requiring Attained EEXI to result equal or less than the Required EEXI, calculated as (1-Y/100) \times EEDI Reference line value. The reduction factors Y are specific for each ship type. Ship type Size **Reduction factor**

	Bulk carrier	DWT >= 200.000	15	
		20,000 <=DWT < 200,000	20	
		10,000 <= DWT < 20,000	0-20

	operational CII will be achieved during the next 3 years; and	carrier), ro-ro
	 a procedure for self-evaluation and improvement. 	ships,
	SEEMP Part III shall be subject to verification and Company audits taking into account the 2022 IMO Guidelines adopted by Res. MEPC.347(78).	tankers of 5000 GT/ New and existing
9.	Regulation 28 "Operational carbon intensity", requiring	NA
	 bulk carriers, combination carriers, containerships, cruise passenger ships, gas carriers, general cargo ships, LNG carriers, refrigerated cargo carriers, ro-ro cargo ships, ro-ro cargo ships (vehicle carrier), ro-ro passenger ships and tankers of 5000GT and above engaged in international voyage to: 	
	 from 2023, after the end of each calendar year, calculate the Attained annual operational CII over a 12-month period from 1 January to 31 December for the preceding calendar year, using the data collected and taking into account the 2022 IMO CII Guidelines G1, adopted by Res. MEPC.352(78). In case of change of Flag and/or Company, the Attained annual operational CII shall be calculated and reported for the full 12-month period from 1 January to 31 December in the calendar year during which the transfer task place. 	
	 electronically report to the Administration the calculated attained annual operational CII within March of each calendar year; 	
	 determine the Required annual operational CII as (1-Z/100) × CII_R, where the annual reduction factor Z is a flat rate for all ship types (i.e. 5% for 2023; 7% for 2024; 9% for 2025; 11% for 2026 and % still to be decided for 2027-2030 (refer to 2021 IMO CII Reduction Factors Guidelines G3, adopted by Res. MEPC.338(76)) and the reference values CII_R are calculated according to the 2022 IMO CII Guidelines G2, adopted by Res. MEPC.353(78); 	
	 Administration to verify the Attained annual operational CII against the Required annual operational CII to determine operational carbon intensity rating A, B, C, D or E, taking into account the 2022 IMO CII Rating Guidelines G4, adopted by Res. MEPC.354(78). The middle point of rating level C shall be the value equivalent to the required annual operational CII; 	
	 a ship rated as D for three consecutive years or rated as E, to develop a plan of corrective actions to achieve the Required annual operational CII and include it in the SEEMP. The revised SEEMP shall be submitted to the Administration for verification, preferably together with, but in no case later than 1 month after reporting the attained annual operational CII. 	
	Please note that according to the "Interim guidance on the use of biofuels under regulations 26, 27 and 28 of MARPOL Annex VI	

1 November 2022

14	 (DCS and CII)", issued as MEPC.1/Circ.905, the CF of a biofuel - which is certified by an international certification scheme, acceptable to the Administration and meeting its sustainability criteria, and that provide a well-to-wake GHG emissions reduction of at least 65% compared to the well-to-wake emissions of fossil MGO of 94 gCO_{2e}/MJ /(i.e. achieving an emissions intensity not exceeding 33 gCO_{2eq}/MJ) - equals to the value of the well-to-wake GHG emissions of the fuel according to the certificate (expressed in gCO_{2eq}/MJ) multiplied by its lower calorific value. 10.Appendix VIII "Form of International Energy Efficiency (IEE) Certificate", including the new format of the Supplement; 11.Appendix X "Form of Statement of Compliance – Fuel Oil 	All ships/ New and existing
	Consumption Reporting", including the format of the Statement of Compliance to be issued by the Administration;

2011 ESP CODE

2021 Amendments

Resolution MSC.483(103) adopted on 13 May 2021 amends Part A of Annex B so that:

16	the provisions for oil tankers are in line with the ones for bulk	Oil tankers/
	carriers, requiring only "suspect areas" to be subject to thickness	New and
	measurements at the first renewal survey of a double hull oil tanker	existing
	and deleting the other items currently listed in the table of minimum	
	requirements for thickness measurements (i.e. "one section of deck	
	plating for the full beam of the ship within the cargo area"; and	
	"measurements, for general assessment and recording of corrosion	
	pattern, of those structural members subject to close-up survey).	

STCW CODE (CODE ON STANDARDS OF TRAINING, CERTIFICATION AND WATCHKEEPING FOR SEAFARERS)

2021 Amendments

The amendments, adopted by Resolution MSC.487(103) on 13 May 2021, include:

17 the "electro-technical officer" among those officers mentioned in the definition of the "operational level" and specify their responsibilities (section A-I/1, sub-paragraph 3.1).

STCW CONVENTION (CONVENTION ON STANDARDS OF TRAINING, CERTIFICATION AND WATCHKEEPING FOR SEAFARERES)

2021 Amendments

The amendments, adopted by Resolution MSC.486(103) on 13 May 2021, introduce the following new definition:

ľ	18	"High voltage", meaning "alternating current (AC) or direct current	All ships/
		(DC) voltage in excess of 1,000 volts".	New and
			existing

MARPOL 73/78

2021 Revised MARPOL Annex VI "Regulations for the prevention of air pollution from ships"

Resolution MEPC.328(76) adopted new Revised MARPOL Annex VI which includes – inter alia - the decarbonization requirements aiming at achieving the goals set in the IMO strategy on reduction of GHG emissions:

19	. Regulation 5 "Surveys", requiring ships of 400 GT to which Regulations 23 and 25 apply (see bullets No. 3 and 4 below) to have the attained EEXI verified - in accordance with the requirements in Regulations 23 and 25 - at the first annual, intermediate or renewal survey of the IAPP or the initial survey of the IECC Certificate, whichever is the first, on or after 1 January 2023 ;	Bulk carriers, combination carriers, container ships, cruise
	2. Regulation 23 "Attained Energy Efficiency Existing Ship Index (Attained EEXI)", requiring bulk carriers, combination carriers, containerships, cruise passenger ships having non-conventional propulsion, gas carriers, general cargo ships, LNG carriers, refrigerated cargo carriers, ro-ro cargo ships, ro-ro cargo ships (vehicle carrier), ro-ro passenger ships and tankers of 400 GT and above engaged in international voyages, to calculate the Attained EEXI.	passenger ships with non- conventional propulsion, gas carriers, general cargo ships, LNG
	The Attained EEXI shall be calculated taking into account the 2022 IMO Guidelines adopted by Res. MEPC.350(78).	carriers, refrigerated
	For those ships already having a verified Attained EEDI, this value may be taken as the Attained EEXI if it is equal to or less than the Required EEXI. In this case, the Attained EEXI shall be verified based on the EEDI Technical File.	cargo carriers, ro- ro cargo ships, ro-ro cargo ships
	 Regulation 25 "Required EEXI", requiring Attained EEXI to result equal or less than the Required EEXI, calculated as (1-Y/100) × EEDI Reference line value. The reduction factors Y are specific for each ship type 	(vehicle carrier), ro- ro passenger ships, tankers of 400 GT/ New and existing

AFS CONVENTION, 2001 (INTERNATIONAL CONVENTION ON THE CONTROL OF HARMFUL ANTI-FOULING SYSTEMS ON SHIPS)

2021 Amendments

The amendments, adopted by Resolution MEPC.331(76) on 17 June 2021, modify the following:

20	1. Annex 1 "Controls on anti-fouling systems", prohibiting the use of Anti-Fouling Systems containing cybutryne as follows:	All ships/ New and
	 ships shall not apply or re-apply anti-fouling systems containing this substance from 1 January 2023; and 	existing
	 ships with an anti-fouling system that contains this substance in the external coating layer of their hulls or external parts or surfaces on 1 January 2023 shall either: 	
	 remove the anti-fouling system; or 	
	 apply a coating that forms a barrier to this substance leaching from the underlying non-compliant anti-fouling system 	
	at the next scheduled renewal of the anti-fouling system after 1 January 2023, but no later than 60 months following the last application to the ship of an anti-fouling system containing	

1 January 2023

cybutryne.

2. Appendix 1 to Annex 4 "Model form of International Anti-fouling System Certificate", reflecting the above and identifying also the cases where ships that had applied an anti-fouling system containing cybutryne previously, but have such a system not currently contained in the external coating layer of their hulls or external parts or surfaces.

1 April 2023

MARPOL 73/78

2020 Amendments to the revised Annex VI "Regulations for the prevention of air pollution from ships"

The amendments adopted by Resolution MEPC.324(75) on 20 November 2020 modify, inter alia, Regulation 14 "Sulphur oxides (SO_x) and particulate matter" requiring:

21	sampling point(s) to be fitted or designated on existing ships (i.e. ships constructed before 1 April 2022) for taking representative samples for the "in-use" fuel, not later than the first renewal survey of the IAPP Certificate on or after 1 April 2023 .	All ships/ Constructed before 1 April 2022
	Reference should be made to the following Guidelines:	
	 2019 Guidelines for on board sampling for the verification of the sulphur content of the fuel oil used on board ships (MEPC.1/Circ.864/Rev.1); and 	
	 2020 Guidelines for on board sampling of fuel oil intended to be used or carried for use on board a ship (MEPC 1/Circ 889) 	

1 June 2023

MARPOL 73/78

2016 Amendments to the revised Annex IV "Regulations for the prevention of pollution by sewage from ships"

The amendments adopted by Resolution MEPC.274(69) on 22 April 2016, specify, inter alia, the implementation date of the new discharge requirements for passenger ships in the Baltic Sea Special Area. In particular:

22	The discharge of sewage in the Baltic Sea Special Area – adopted	Passenger
	by Resolution MEPC.275(69) on 22 April 2016 – shall be prohibited	ships/
	from 1 June 2023 for passenger ships, contracted or constructed	Contracted
	before 1 June 2019, en route directly to or from a port located	or
	outside the special area and to or from a port located east of	constructed
	longitude 28°10' E within the special area that do not make any other	before 1
	port calls within the special area (as clarified by Res.	June 2019
	MEPC 275(69))	
	A passenger ship may be exempted from the application of this	
	requirement when has in operation an approved sewage treatment	
	plant which has been certified by the Administration to meet the	
	operational requirements set in Regulation 9.2.1 of the Annex (taking	
	into account the "2012 guidelines on implementation of effluent	
	standards and performance standards on performance test" adopted	
	by Resolution MERC 227(64) as amonded by Resolution	
	by Resolution MEPC.227(64), as amended by Resolution	
	MEPC.284(70) dated 28 October 2016)), and the effluent shall not	
	produce visible floating solids nor cause discoloration of the	
	surrounding water.	

1 November 2023

MARPOL 73/78

2022 Amendments to Annex II "Regulations for the control of pollution of noxious liquid substances in bulk

The amendments adopted by Resolution MEPC.344(78) on 10 June 2022, modify Appendix I "Guidelines for the categorization of noxious liquid substances" due to the publication of the revised GESAMP Reports and Studies No. 64, as follows:

23	_	refinement of column C3, adding a sub-categorization (inhalation toxicity) to provide a more realistic hazard profile for the purposes of risk management; and	Tankers/ New and existing
		modifications to column E1 on flammability hazard ratings.	

1 December 2023

IMSBC CODE (INTERNATIONAL MARITIME SOLID BULK CARGOES)

2022 Amendments

The amendments adopted by Resolution MSC.500(105) on 28 April 2022, include, inter alia:

24	 revised definition of "Group A cargoes" (i.e. cargoes which possess a hazard due to moisture that may result in liquefaction or dynamic separation if shipped at a moisture content in excess of their transportable moisture limit); 	All Ships carrying solid bulk cargoes/ New and existing
	 new definition of "Cargoes which may undergo dynamic separation" (i.e. cargoes which contain a certain proportion of fine particles and a certain amount of moisture, and may undergo dynamic separation if shipped at a moisture content in excess of their transportable moisture limit); 	
	 new definition of "Dynamic separation" (i.e. the phenomenon of forming a liquid slurry (water and fine solids) above the solid material, resulting in a free surface effect which may significantly affect the ship's stability); 	
	 corresponding amendments throughout the Code due to the above-listed new/revised definitions; and 	
	 new schedules for "Ammonium nitrate based fertilizer"; "Clam shell"; "Leach residue containing lead"; and "Superphosphate (triple, granular)". 	

2024

1 January 2024

SOLAS 1974

2017 Amendments

The amendments adopted by Resolution MSC.421(98) on 15 June 2017, introduce, inter alia, modifications to SOLAS Chapter II-1 applicable to the following ships:

25	Modifications to new stability requirements (Ch. II-1) which are applicable - unless provided otherwise – to ships:	All ships/ Delivered on
	 for which the building contract is placed on or after 1 January 2020; 	or after 1 January 2024
	 in the absence of a building contract, the keel of which is laid or which are at a similar stage of construction on or after 1 July 2020; or 	
	 the delivery of which is on or after 1 January 2024. 	
	In applying the new revised stability requirements reference should be made to the Revised Explanatory Notes adopted by Resolution MSC.429(98)/Rev.1.	

2019 Amendments

The amendments, adopted by Resolution MSC.456(101) on 14 June 2019, modify Forms C, E and P as follows:

26	Item 8.1	l is	replaced	by	"Rudder,	propeller,	thrust,	pitch	and	All ships/
	operatio	nal m	node indica	tor".						New and
										existing

2020 Amendments

The amendments, adopted by Resolution MSC.474(102) on 11 November 2020, introduce modifications to Chapter II-1, as follows:

 Regulation II-1/1 "Application", defining "ships constructed on or after 1 January 2024" as ships: 	NA
 for which the building contract is placed on or after 1 January 2024; or 	
 in the absence of a building contract, the keel of which is laid or which are at a similar stage of construction on or after 1 July 2024; or 	

	 the delivery of which is on or after 1 January 2028. 	
	 – "all ships" as ships constructed before, on or after 1 January 2009 	
	The unified interpretation issued as MSC.1/Circ.1673 clarified that "ships constructed before 1 January 2024" included those having a keel-laying date, or are at a similar stage of construction date, on or after 1 July 2020 but before 1 July 2024, provided they were delivered before 1 January 2028.	
	In applying the new subdivision and damage stability requirements (see items 3 to 10 below) reference should be made to the Revised Explanatory Notes adopted by Res. MSC.429(98)/Rev.2.	
27	 Regulation II-1/3-8 "Towing and mooring equipment" requiring for ships of 3000GT and above for which: 	All ships/ Contracted
	 the building contract is placed on or after 1 January 2024; or 	on or after 1 January 2024
	 in the absence of a building contract, the keel of which is laid or which is at a similar stage of construction on or after 1 July 2024; or 	
	the delivery of which is on or after 1 January 2027	
	- the mooring arrangement to be designed, and the mooring equipment including lines to be selected, in order to ensure occupational safety and safe mooring of the ship, based on the Guidelines on the design of mooring arrangements and the selection of appropriate mooring equipment and fittings for safe mooring (MSC.1/Circ.1619). Ship-specific information shall be provided and kept on board (reference should be made to section 5 of MSC.1/Circ.1175/Rev.1).	
	Clarifications on the documentation necessary to support an Administration/RO in verifying compliance with Reg. II-1/3-8 are provided in MSC.1/Circ.1362/Rev.2.	
28	 mooring equipment, including lines, of all ships to be inspected and maintained in a suitable condition for their intended purposes (reference should be made to MSC.1/Circ.1620). 	All ships/ New and existing
29	3. Regulation II-1/7-2 "Calculation of the factor s _i ", clarifying that	Passenger
	for passenger ships constructed before 1 January 2024, the factor s _i is to be taken as zero in those cases where the final waterline, taking into account sinkage, heel and trim, immerses the lower edge of openings through which progressive flooding may take place and such flooding is not accounted for in the calculation of factor s _i . Such openings shall include air pipes, ventilators and openings which are closed by means of weathertight doors or hatch covers;	Contracted before 1 January 2024
30	 for passenger ships constructed on or after 1 January 2024, the factor s_i is to be taken as zero if, taking into account sinkage, heel and trim, it occurs in any intermediate stage or in the final stage of flooding, that immersion of the lower edge of openings through which progressive flooding may take place and such flooding is not accounted for in the calculation of 	Passenger ships/ Contracted on or after 1 January 2024

1 January 2024

	factor s _i . Such openings shall include air pipes, ventilators and openings which are closed by means of weathertight doors or hatch covers.	
31	4. Regulation II-1/12 "Peak and machinery space bulkheads, shaft tunnels, etc.", allowing the use any type of valve at the collision bulkhead (e.g. screw-down, butterfly). This requirement may be also voluntarily applicable to ships constructed before 1 January 2024 according to MSC.8/Circ.1.	All ships/ Contracted on or after 1 January 2024
32	5. Regulation II-1/13 "Openings in watertight boundaries below the bulkhead deck in passenger ships", clarifying – inter alia – the requirements of the safety centre and the central operating control, including its location.	Passenger ships/ Contracted on or after 1 January 2024
	The unified interpretation issued as MSC.1/Circ.1362/Rev.2 clarifying that heat-sensitive piping systems penetrating a watertight bulkhead or deck on a passenger ship should be tested and type-approved for watertight integrity after the fire test, as per the Explanatory Notes to Reg. II-1/13.2.3.4 (Res. MSC.429(98)/Rev.1 or Rev.2, as applicable).	
33	6. Regulation II-1/15 "Openings in the shell plating below the bulkhead deck of passenger ships and the freeboard deck of cargo ships", requiring – inter alia - cargo ports and other similar openings (e.g. gangway and fuelling ports) in the side of ships below the bulkhead deck of passenger ships and the freeboard deck of cargo ships to be fitted with doors so designed as to ensure the same watertightness and structural integrity as the surrounding shell plating. Unless otherwise granted by the Administration, these openings shall open outwards. The number of such openings shall be the minimum compatible with the design and proper working of the ship. In no case shall these openings be so fitted as to have their lowest point below the deepest subdivision draught.	All ships/ Contracted on or after 1 January 2024
34	 7. Regulation II-1/17 " Internal watertight integrity of passenger ships above the bulkhead deck", requiring the internal watertight subdivision arrangements to limit the entry and spread of water above the bulkhead deck to be in accordance with the design arrangements necessary for compliance with the stability requirements. Where pipes, scuppers, electric cables, etc. are carried through internal watertight boundaries that are immersed at any intermediate or final stage of flooding in damage cases that contribute to the attained subdivision index A, arrangements shall be made to ensure their watertight subdivision arrangements above the bulkhead deck, and also above the worst intermediate or final stage of flooding waterlines, to be capable of preventing the passage of water when immersed in the required range of positive stability for any damage cases contributing to the attained subdivision index A. These doors may remain open provided they can be remotely closed from the navigation bridge. They shall always be ready to be immediately closed. 	Passenger ships/ Contracted on or after 1 January 2024

1 January 2024

	8. Regulation II-1/19 "Damage control information", requiring passenger ships constructed on or after 1 January 2024, and to which regulation II-1/8-1.3 applies, to include in the damage control information a reference to activation of damage stability support from the onboard stability computer, if installed, and to shore-based support when provided.	
35	 Regulation II-1/21 "Periodical operation and inspection of watertight doors, etc., in passenger ships", requiring weekly operational tests also for ash-chutes and rubbish-chutes. 	Passenger ships/ New and existing
36	10.Regulation II-1/22 "Prevention and control of water ingress, etc.", requiring gangway, cargo and fuelling ports fitted below the bulkhead deck of passenger ships and the freeboard deck of cargo ships and all watertight hatches to be effectively closed and secured watertight before the voyage commences, and be kept closed during navigation. However, the master may permit a watertight hatch to be opened during navigation for a limited period of time sufficient to permit passage or for access. It shall then be closed.	All ships/ Contracted on or after 1 January 2024

2021 Amendments

The amendments, adopted by Resolution MSC.482(103) on 13 May 2021, introduce new Regulation II-1/25-1 and changes to Regulation III/33, as follows:

37	1.	Regulation II-1/25-1 requring	Multiple
		 multiple hold cargo ships other than bulk carriers and tankers constructed on or after 1 January 2024 (refer to the Unified Interpretation issued as MSC.1/Circ.1673) to be fitted with water level detectors in each cargo hold intended for dry cargoes, complying with the: 	ships other than bulk carriers and tankers/ Constructed
		 performance standards not inferior to those specified in Res. MSC.188(79)/Rev.2, if installed on or after 1 January 2024; 	on or after 1 January 2024
		 performance standards not inferior to those specified in Res. MSC.188(79), if installed before 1 January 2024. 	
		 the water level detectors to: 	
		 give audible and visual alarms at the navigation bridge, one when the water level above the bottom of the cargo hold reaches a height of not less than 0.3 m, and another at a height not less than 15% of the depth of the cargo hold but not more than 2 m; and 	
		 be fitted at the aft end of the cargo holds. For cargo holds which are occasionally used for water ballast, an alarm overriding device may be installed. The visual alarms shall clearly discriminate between the two different water levels detected in each hold. 	
		As an alternative to the water level detector at a height of not less than 0.3 m, a bilge level sensor serving the bilge pumping arrangements required by SOLAS Reg. II-1/35-1 and installed in the cargo hold bilge wells or other suitable	

	location is considered acceptable, subject to:	
	 the fitting of the bilge level sensor at a height of not less than 0.3 m at the aft end of the cargo hold; and 	
	 the bilge level sensor giving audible and visual alarm at the navigation bridge which is clearly distinctive from the alarm given by the other water level detector fitted in the cargo hold. 	
38	 Regulation III/33, excluding free-fall lifeboats on cargo ships of 20000 GT and upwards from the requirement to be launched with the ship making headway at speeds up to 5 knots in calm water. 	Cargo ships of 20000 GT/ New and existing ships

2022 Amendments

The amendments, adopted by Resolution MSC.496(105) on 28 April 2022, modify the following - due to the modernization of the requirements for the Global Maritime Distress and Safety System (GMDSS):

39	1.	Chapter II-1, updating references to Chapter IV;	All ships/
	2.	Chapter III, relocating the provision for life-saving appliance communication equipment (e.g. two-way VHF radiotelephpne apparatus and search and rescue locating devices) to SOLAS Chapter IV;	New and existing
	3.	Chapter IV, revising the entire Chapter to align it with the current technologies and satellite providers. While the performance standards were updated, the carriage requirements for ships subject to GMDSS remain unchanged.	
		The revised Performance standards, Guidance and Guidelines include:	
		 System performance standard for the promulgation and coordination of maritime safety information using high- frequency narrow-band direct-printing (Res. MSC.507(105)) 	
		 Performance standards for the reception of maritime safety information and search and rescue related information by MF (NAVTEX) and HF (Res. MSC.508(105)) 	
		 Provision of radio services for the GMDSS (Res. MSC.509(105)) 	
		 Performance standards for search and rescue radar transponders (Res. MSC.510(105)) 	
		 Performance standards for shipborne VHF radio installations capable of voice communication and digital selective calling (Res. MSC.511(105)) 	
		 Performance standards for shipborne MF and MF/HF radio installations capable of voice communication, digital selective calling and reception of maritime safety information and search and rescue related information (Res. MSC.512(105)) 	
		 Performance standards for INMARSAT-C ship earth stations capable of transmitting and receiving direct-printing 	

	communications (Res. MSC.513(105))
	 Guidelines for the avoidance of false distress alerts (Res. MSC.514(105))
	 Performance standards for survival craft portable two-way vhf radiotelephone apparatus (Res. MSC.515(105))
	 Amendments to the performance standards for radiocommunication equipment (Res. MSC.516(105))
	 Performance standards for a shipborne integrated communication system (ICS) when used in the GMDSS (Res. MSC.517(105))
	 GMDSS operating guidance for ships in distress situations (MSC.1/Circ-1656);
	 Procedure for responding to DSC distress alerts by ships (MSC.1/Circ.1657);
	 Guidance on distress alerts (MSC.1/Circ.1658).
	In relation to the Performance standards adopted by Res. MSC.511(105), MSC.512(105), MSC.513(105) as listed above, the Maritime Safety Committee at its 107th session in June 2023 considered unrealistic for new shipborne VHF radio installations, shipborne MF and MF/HF radio installations or Inmarsat-C ship earth stations conforming to performance standards to be available for installation from 1 January 2024.
	Therefore, Member States were invited (MSC.1/Circ.1676) to consider permitting until 1 January 2028 the continued installation of:
	 shipborne VHF radio installations conforming to performance standards not inferior to those specified in the annex to Res.n A.803(19), as amended;
	 shipborne MF and MF/HF radio installations conforming to performance standards not inferior to those specified in the annex to Res. A.804(19), as amended and A.806(19), as amended; and
	 Inmarsat-C ship earth stations conforming to performance standards not inferior to those specified in the annex to Res. A.807(19), as amended.
4.	Chapter V, updating references to Chapter IV; and
5.	the Passenger Ship Safety Certificate, the Cargo Ship Safety Equipment Certificate, the Cargo Ship Safety Radio Certificate, the Nuclear Passenger Ship Safety Certificate and the Nuclear Cargo Ship Safety Certificate, including the associated records of equipment for passenger ship safety (Form P), cargo ship safety (Form E), cargo ship safety radio (Form R) and cargo ship safety (Form C), reflecting the amendments to Chapters above.

All ships/ New and

existing

SOLAS PROTOCOL 1988

2022 Amendments

The amendments, adopted by Resolution MSC.497(105) on 28 April 2022, modify the following Forms:

- 40 Passenger Ship Safety Certificate;
 - Cargo Ship Safety Equipment Certificate;
 - Cargo Ship Safety Radio Certificate; and
 - Cargo Ship Safety Certificate.

FSS CODE (INTERNATIONAL CODE FOR FIRE SAFETY SYSTEM)

2019 Amendments

The amendments, adopted by Resolution MSC.457(101) on 14 June 2020, replace the term "forward of" with "downstream of" used in the following paragraphs of Chapter 15 - in line with the Unified interpretation issued by MSC.1/Circ.1582/Rev.1:

41	 Para. 2.2.3.2.1, reading "the inert gas main may be divided into two or more branches downstream of the non-return devices"; Para. 2.2.3.2.6, reading "the arrangements shall consist of a 250 mm nominal pipe size bolted flange, isolated from the inert gas main by a valve and located downstream of the non-return valve"; 	All ships/ Constructed on or after 1 January 2024
	 Para. 2.2.4.2.1, reading "the pressure of the inert gas mains downstream of the non-return devices". 	

2021 Amendments

The amendments, adopted by Resolution MSC.484(103) on 13 May 2021 include fault isolation requirements for "individually identifiable fire detector systems" (i.e. a system with the capability to identify the exact location and type of detector or manually activated call point which has activated, and which can differentiate the signal of that device from all others) clarifying that:

42	in cargo ships and on passenger ship cabin balconies, where an	All ships/
	individually identifiable system is fitted, isolator modules need not be	Constructed
	provided at each fire detector if the system is arranged in such a way	on or after 1
	that the number and location of individually identifiable fire detectors	January
	rendered ineffective due to a fault would not be larger than an	2024
	equivalent section in a section identifiable system.	

1944 HSC CODE (INTERNATIONAL CODE OF SAFETY FOR HIGH-SPEED CRAFT)

2022 Amendments

The amendments, adopted by Resolution MSC.498(105) on 28 April 2022, modify the following - in line with GMDSS modernization requirements included in SOLAS:

43	_	Chapter 8, relocating the life-saving appliance communication equipment requirements to Chapter 14;	HSC/ Constructed before 1 July 2002
	_	Chapter 14, requiring craft to be provided with radiocommunications facilities as specified in Chapter 14 of the 2000 HSC Code (Res. MSC.97(73)), as amended up to and including resolution MSC.499(105), that are fitted and operated in accordance with the provisions of that Chapter; and	
	_	the Form of Safety Certificate for High-Speed Craft, including the associated record of equipment for High-Speed Craft Safety Certificate, in line with the above-modifications.	

2000 HSC CODE (INTERNATIONAL CODE OF SAFETY FOR HIGH-SPEED CRAFT)

2022 Amendments

The amendments, adopted by Resolution MSC.499(105) on 28 April 2022, modify the following:

44	 Chapter 8, relocating the life-saving appliance communication equipment requirements to Chapter 14; 	HSC/ New and
	 Chapter 14, replacing the entire text in line with GMDSS modernization requirements included in SOLAS; and 	existing
	 the Form of Safety Certificate for High-Speed Craft, including the associated record of equipment for High-Speed Craft Safety Certificate, in line with the above-modifications. 	

IGC CODE (INTERNATIONAL CODE FOR THE CONSTRUCTION AND EQUIPMENT OF SHIPS CARRYING LIQUEFIED GASES IN BULK)

2020 Amendments

-		
45	Para. 6.5.3.5.1, introducing welding and non-destructive testing	Gas
	requirements for alternative materials, such as aluminum alloys,	carriers/
	used in cargo tanks, fuel tanks and process pressure vessels.	Constructed
		on or after 1
		January 2024

2021 Amendments

The amendments, adopted by Resolution MSC.492(104) on 8 October 2021, modify the following - in line with SOLAS Regulation II-1/13:

46	Paragraph 2.7.1.1 allowing the use in watertight bulkheads of:	Gas
	 hinged watertight access doors with open/closed indication locally and at the navigation bridge, of the quick-acting or single-action type that are normally closed at sea, and 	carriers/ New and existing
	- hinged watertight doors that are permanently closed at sea.	

IGF CODE (INTERNATIONAL CODE OF SAFETY FOR SHIPS USING GASES OR OTHER LOW-FLASHPOINT FUELS)

2019 Amendments

The amendments, adopted by Resolution MSC.458(101) on 14 June 2019, are applicable to new ships only (i.e. for which the building contract is placed **on or after 1 January 2024**; or in the absence of a building contract, the keels of which are laid or which are at a similar stage of construction on or after 1 July 2024; or the delivery of which is on or after 1 January 2028) and require – inter alia - the following:

47	 in cases where the tank insulation and tank location make the probability very small for the tank contents to be heated up due to an external fire, special considerations may be made to allow a higher loading limit than calculated using the reference temperature, but never above 95%. (para. 6.8.3); 	Ships using low- flashpoint fuels/ Contracted on or after 1 January 2024
	 where gaseous fuel pipes pass through enclosed spaces in the ship, they shall be protected by a secondary enclosure. This enclosure can be a ventilated duct or a double wall piping system (para. 9.5.4). This is not applicable for fully welded fuel gas vent pipes led through mechanically ventilated spaces (para. 9.5.5); 	
	 liquefied fuel pipes shall be protected by a secondary enclosure able to contain leakages. This requirement may be waived by the Administration if the piping system is in a fuel preparation room or a tank connection space. Where gas detection is not fit for purpose, the secondary enclosures around liquefied fuel pipes shall be provided with leakage detection by means of pressure or temperature monitoring systems, or any combination thereof (para. 9.5.6); 	
	- the exhaust system shall be equipped with explosion relief systems unless designed to accommodate the worst case overpressure due to ignited gas leaks or justified by the safety concept of the engine. A detailed evaluation of the potential for unburnt gas in the exhaust system is to be undertaken covering the complete system from the cylinders up to the open end. This detailed evaluation shall be reflected in the safety concept of the engine (para. 10.3.1.1.1).	
	 the space containing the fuel containment system shall be separated from the machinery spaces of category A or other 	

1 January 2024

rooms with high fire risks. The separation shall be done by a cofferdam of at least 900 mm with insulation of A-60 class. When determining the insulation of the space containing the fuel containment system from other spaces with lower fire risks, the fuel containment system shall be considered as a machinery space of category A. For type C tanks, the fuel storage hold space may be considered as a cofferdam (para. 11.3.3)	
 the fuel storage hold space may be considered as a cofferdam provided that (para. 11.3.3.1): 	
 the type C tank is not located directly above machinery spaces of category A or other rooms with high fire risk; and 	
 the minimum distance to the A-60 boundary from the outer shell of the type C tank or the boundary of the tank connection space, if any, is not less than 900 mm. 	

2020 Amendments

The amendments, adopted by Resolution MSC.475(102) on 11 November 2020, modify the following:

48	 Regulation 6.7.1.1, excluding "tank cofferdan suitable pressure relief system; 	ns" from having a Ships using low-
	 new regulation 11.8, requiring fuel preparation pumps, compressors or other potential igniti provided with a fixed fire-extinguishing system provisions of SOLAS Regulation II-2/10.4.1. account the necessary concentrations/application extinguishing gas fires; and 	a rooms containing on sources to be complying with the 1 and taking into on rate required for
	 Para. 16.3.3.5.1, introducing welding and non- requirements for alternative materials, such as used in cargo tanks, fuel tanks and process pre 	destructive testing s aluminum alloys, ssure vessels.

IMDG CODE (INTERNATIONAL MARITIME DANGEROUS GOODS)

2022 Amendments

The amendments, adopted by Resolution MSC.501(105) on 28 April 2022, include, inter alia, the following:

49	 new and revised definitions (e.g. "Working pressure"; "Pressure receptacle shell"; "Service equipment"); 	All ships carrying dangerous goods/
	 new entry for "Electrical resistance" in the units of measurement; 	
	 clarification on labelling of overpacks containing radioactive materials (class 7 goods); and 	New and existing
	 new provisions for the design, construction, inspection and testing of portable tanks with shells made of fibre-reinforced plastics (FRP) materials. 	

1 January 2024

In line with the amendments to the IMDG Code, the Emergency Response Procedures for Ships Carrying Dangerous Goods (EmS Guide) has been completely revised and issued by MSC.1/Circ.1588/Rev.2.

LSA CODE (INTERNATIONAL LIFE SAVING APPLIANCE)

2019 Amendments

The amendments, adopted by Resolution MSC.459(101) on 14 June 2019 modify the following:

50	_	Para. 4.4.8.1, excluding lifeboat equipped with two independent propulsion systems (i.e. two separate engines, shaft lines, fuel tanks, piping systems and any other associated ancillaries) and free fall lifeboat to have sufficient buoyant oars to make headway in calm seas.	All ships/ New and existing
51	_	 Para. 6.1.1.3, permitting - on cargo ships, equipped with a rescue boat which is not one of the ship's survival craft, having a mass not more than 700 kg in fully equipped condition, with engine, but without the crew - the launching appliance of the boat not to be fitted with stored mechanical power provided that: manual hoisting from the stowed position and turning out to the embarkation position is possible by one person; the force on the crank handle does not exceed 160 N at the maximum crank radius of 350 mm; and means having sufficient strength such as bowsing line are provided for bringing the rescue boat against the ship's side and holding it alongside so that persons can be safely embarked. 	Cargo ships/ New and existing (for installation on or after 1 January 2024)

2021 Amendments

The amendments, adopted by Resolution MSC.485(103) on 13 May 2021, modify the following - in line with SOLAS Regulation III/33, as amended by Res. MSC.482(103):

52	Para. 4.4.1.3.2 exempts free-fall lifeboats from being of sufficient strength to be capable of being launched and towed when the ship is making headway at speeds up to 5 knots in calm water.	Cargo ships/ New and
	This has been also reflected in the Revised recommendation on testing of life-saving appliances (Res. MSC.81(70), as amended by Res. MSC.488(103)).	existing

LOAD LINES PROTOCOL 1988

2021 Amendments

The amendments, adopted by Resolution MSC.491(104) on 8 October 2021, modify the following - in line with SOLAS Regulation II-1/13:

53	Regulation 27(13)(a) allowing the use in watertight bulkheads of:	All ships
	 hinged watertight access doors with open/closed indication locally and at the navigation bridge, of the quick-acting or single-action type that are normally closed at sea, and 	New and existing

-hinged watertight doors that are permanently closed at sea.

MARPOL 73/78

2022 Amendments to Annex I "Regulations for the prevention of pollution by oil"

The amendments, adopted by Resolutions MEPC.343(78) on 10 June 2022, modify the following - in line with the SOLAS requirements:

54	Regulation 28 "Subdivision and damage stability", allowing the use of	Oil tankers/
	watertight doors of hinged-type.	New and
		existing

2021 Revised MARPOL Annex VI "Regulations for the prevention of air pollution from ships"

Resolution MEPC.328(76) adopted new Revised MARPOL Annex VI requiring – inter alia - after the end of calendar year 2023 and after the end of each following calendar year:

55	1. according to Regulation 6 "Issue or endorsement of Certificates and Statements of Compliance related to fuel oil consumption reporting and operational carbon intensity rating", the Administration to:	Bulk carriers, combination carriers,
	 verify that the attained annual operational Carbon Intensity Indicator (CII) reported, is based on the data submitted; and 	container ships, cruise
	 based on the verified attained annual operational CII, determine the operational carbon intensity rating of the ship. 	passenger ships,
	2. according to Regulation 28 "Operational carbon intensity",	general
	 bulk carriers, combination carriers, containerships, cruise passenger ships, gas carriers, general cargo ships, LNG carriers, refrigerated cargo carriers, ro-ro cargo ships, ro-ro cargo ships (vehicle carrier), ro-ro passenger ships and tankers of 5000GT and above engaged in international voyage to: 	cargo ships, LNG carriers, refrigerated cargo carriers, ro-
	 calculate the Attained annual operational CII over a 12- month period from 1 January to 31 December for the 	ro cargo ships, ro-ro cargo ships

1 January 2024

preceding calendar year, using the data collected and taking into account the 2022 IMO CII Guidelines G1, adopted by Res. MEPC.352(78). In case of change of Flag and/or Company, the Attained annual operational CII shall be calculated and reported for the full 12-month period from 1 January to 31 December in the calendar year during which the transfer took place;	(vehicle carrier), ro- ro passenger ships, tankers of 5000 GT/ New and
 electronically report to the Administration the calculated attained annual operational CII within March of each calendar year; 	existing
 determine the Required annual operational CII as (1-Z/100) × CIIR where the annual reduction factor Z is a flat rate for all ship types (i.e. 5% for 2023; 7% for 2024; 9% for 2025; 11% for 2026 and % still to be decided for 2027-2030 (refer to 2021 IMO CII Reduction Factos Guidelines G3, adopted by Res. MEPC.338(76)) and the reference values CIIR are calculated according to the 2022 IMO CII Guidelines G2, adopted by Res. MEPC.353(78); 	
 Administration to verify the Attained annual operational CII against the Required annual operational CII to determine operational carbon intensity rating A, B, C, D or E, taking into account the 2022 IMO CII Rating Guidelines G4, adopted by Res. MEPC.354(78). The middle point of rating level C shall be the value equivalent to the required annual operational CII; 	
 a ship rated as D for three consecutive years or rated as E, to develop a plan of corrective actions to achieve the Required annual operational CII and include it in the SEEMP. 	
The revised SEEMP shall be submitted to the Administration for verification, preferably together with, but in no case later than 1 month after reporting the attained annual operational CII.	

1 May 2024

MARPOL 73/78

2022 Amendments to Annex I "Regulations for the prevention of pollution by oil"

The amendments, adopted by Resolution MEPC.359(79) on 16 December 2022, modify the following:

	 Regulation 38 "Reception facilities", including the possibility for States, the coastline of which borders on Arctic waters, to enter into regional arrangements for port reception facilities. The 2012 Guidelines for the development of a regional reception facilities plan has been amended accordingly (Res. MEPC.363(79) adopted on 16 December 2022); and 	NA Related to Member States
56	 Form B of the Supplement to IOPP Certificate introducing new references in the title of section 5 "Construction". 	All ships/ New and existing

2022 Amendments to Annex II "Regulations for the control of pollution of noxious liquid substances in bulk"

The amendments adopted by Resolution MEPC.359(79) on 16 December 2022 modify the following:

Regulation 18 "Reception facilities and cargo unloading terminal	NA
arrangements", including the possibility for States, the coastline of	Related to
which borders on Arctic waters, to enter into regional arrangements	Member
for port reception facilities. The 2012 Guidelines for the development	States
of a regional reception facilities plan has been amended accordingly	
(Res. MEPC.363(79) adopted on 16 December 2022).	

2022 Amendments to the revised Annex IV "Regulations for the prevention of pollution by sewage from ships"

The amendments adopted by Resolution MEPC.359(79) on 16 December 2022 modify the following:

Regulation 12 "Reception facilities", including the possibility for	NA
States, the coastline of which borders on Arctic waters, to enter into	Related to
regional arrangements for port reception facilities. The 2012	Member
Guidelines for the development of a regional reception facilities plan	States
has been amended accordingly (Res. MEPC.363(79) adopted on 16	
December 2022).	

2022 Amendments to Annex V "Regulations for the prevention of pollution by garbage from ships"

The amendments adopted by Resolutions MEPC.360(79) on 16 December 2022 modify the following:

	 Regulation 8 "Reception facilities", including the possibility for States, the coastline of which borders on Arctic waters, to enter into regional arrangements for port reception facilities. The 2012 Guidelines for the development of a regional reception facilities plan has been amended accordingly (Res. MEPC.363(79) adopted on 16 December 2022); and 	NA Related to Member States
57	 Regulation 10 "Placards, garbage management plans and garbage record-keeping", extending the obligation to carry a Garbage Record Book to all ships of 100 GT and above. 	All ships of 100GT and above/ New and existing

2022 Amendments to Annex VI "Regulations for the prevention of air pollution from ships"

The amendments adopted by Resolutions MEPC.361(79) and MEPC.362(79) on 16 December 2022 modify the following:

	 Regulation 14 "Sulphur oxides (SOx) and particulate matter", designating the Mediterranean Sea as a new Emission Control Area for Sulphur oxides (Med SO_X ECA) effective from 1 May 2025. The coordinates of the area are included in new para. 4 of Appendix VII "Emission control areas (Reg.s 13.6 and 14.3)"; 	NA
	 Regulation 17 "Reception facilities", including the possibility for States, the coastline of which borders on Arctic waters, to enter into regional arrangements for port reception facilities. The 2012 Guidelines for the development of a regional reception facilities plan has been amended accordingly (Res. MEPC.363(79) adopted on 16 December 2022); 	NA Related to Member States
58	 Appendix V "Information to be included in the bunker delivery note (Reg. 18.5)", adding the information on the Flashpoint (°C); 	All ships/ New and
	 Appendix IX "Information to be submitted to the IMO Ship Fuel Oil Consumption Database (Reg. 27)", including more information on the ship's carbon intensity performance, such as: 	existing
	 "Year of delivery" instead of "Year of building contract" since it is more relevant in the context of the CII; 	
	–"Attained EEDI" and "Attained EEXI";	
	-"Applicable CII: AER or cgDIST";	
	–"Required annual operational CII";	
	–"Attained annual operational CII before any correction";	
	"Attained annual operational CII";	
	 -"Operation carbon intensity rating"; 	
	–"CII for trial purpose".	

1 July 2024

SOLAS 1974

2020 Amendments

Resolution MSC.474(102) on 11 November 2020, introduce amendments to Chapter II-1 (see **2020 Amendments – 1 January 2024**) and include, inter alia, the following modifications applicable to ships – in the absence of a building contract – the keel of which is laid or which are at a similar stage of construction on or after **1 July 2024**:

59	 Regulation II-1/3-8 "Towing and mooring equipment" requiring for ships of 3000GT and above for which: 	All ships/ Keel laid on
	 the building contract is placed on or after 1 January 2024; or 	or after 1 July 2024
	 in the absence of a building contract, the keel of which is laid or which is at a similar stage of construction on or after 1 July 2024; or 	
	the delivery of which is on or after 1 January 2027	
	the mooring arrangement to be designed, and the mooring equipment including lines to be selected, in order to ensure occupational safety and safe mooring of the ship, based on the Guidelines on the design of mooring arrangements and the selection of appropriate mooring equipment and fittings for safe mooring (MSC.1/Circ.1619). Ship-specific information shall be provided and kept on board (reference should be made to section 5 of MSC.1/Circ.1175/Rev.1).	
60	 Regulation II-1/7-2 "Calculation of the factor si", clarifying that for passenger ships the factor si is to be taken as zero if, taking into account sinkage, heel and trim, it occurs that the immersion of the lower edge of openings through which progressive flooding may take place and such flooding is not accounted for in the calculation of factor si. Such openings shall include air pipes, ventilators and openings which are closed by means of weathertight doors or hatch covers. In applying the new subdivision and damage stability requirements reference should be made to the Revised Explanatory Notes adopted by Res. MSC.429(98)/Rev.2. 	Passenger ships/ Keel laid on or after 1 July 2024
61	3. Regulation II-1/12 "Peak and machinery space bulkheads, shaft tunnels, etc.", allowing the use any type of valve at the collision bulkhead (e.g. screw-down, butterfly).	All ships/ Keel laid on or after 1 July 2024
62	4. Regulation II-1/13 "Openings in watertight boundaries below the bulkhead deck in passenger ships", clarifying – inter alia – the requirements of the safety centre and the central operating control, including its location.	Passenger ships/ Keel laid on or after 1 July 2024

1 July 2024

63	5. Regulation II-1/15 "Openings in the shell plating below the bulkhead deck of passenger ships and the freeboard deck of cargo ships", requiring – inter alia - cargo ports and other similar openings (e.g. gangway and fuelling ports) in the side of ships below the bulkhead deck of passenger ships and the freeboard deck of cargo ships to be fitted with doors so designed as to ensure the same watertightness and structural integrity as the surrounding shell plating. Unless otherwise granted by the Administration, these openings shall open outwards. The number of such openings shall be the minimum compatible with the design and proper working of the ship. In no case shall these openings be so fitted as to have their lowest point below the deepest subdivision draught.	All ships/ Keel laid on or after 1 July 2024
64	 6. Regulation II-1/17 " Internal watertight integrity of passenger ships above the bulkhead deck", requiring the internal watertight subdivision arrangements to limit the entry and spread of water above the bulkhead deck to be in accordance with the design arrangements necessary for compliance with the stability requirements. Where pipes, scuppers, electric cables, etc. are carried through internal watertight boundaries that are immersed at any intermediate or final stage of flooding in damage cases that contribute to the attained subdivision index A, arrangements shall be made to ensure their watertight integrity; and doors in internal watertight subdivision arrangements above the bulkhead deck, and also above the worst intermediate or final stage of flooding waterlines, to be capable of preventing the passage of water when immersed in the required range of positive stability for any damage cases contributing to the attained subdivision index A. These doors may remain open provided they can be remotely closed from the navigation bridge. They shall always be ready to be immediately closed. 	Passenger ships/ Keel laid on or after 1 July 2024
	7. Regulation II-1/19 "Damage control information", requiring passenger ships keel laid on or after 1 January 2024, and to which regulation II-1/8-1.3 applies, to include in the damage control information a reference to activation of damage stability support from the onboard stability computer, if installed, and to shore-based support when provided.	
65	8. Regulation II-1/22 " Prevention and control of water ingress, etc.", requiring gangway, cargo and fuelling ports fitted below the bulkhead deck of passenger ships and the freeboard deck of cargo ships and all watertight hatches to be effectively closed and secured watertight before the voyage commences, and be kept closed during navigation. However, the master may permit a watertight hatch to be opened during navigation for a limited period of time sufficient to permit passage or for access. It shall then be closed.	All ships/ Keel laid on or after 1 July 2024

2022 Amendments

The amendments adopted by Resolution MSC.521(106) dated 10 November 2022 introduce New Chapter XV "Safety measures for ships carrying industrial personnel", making the new International Code of Safety for Ships Carrying Industrial personnel (see **New Code – 1 July 2024**) mandatory as follows:

	1.	Regulation XV/1 "Definitions", specifying – inter alia - that:	NA
		 industrial personnel (IP) means all persons transported or accommodated on board for the purpose of offshore industrial activities performed on board other ships and/or offshore facilities; 	
		 Offshore industrial activities mean the construction, maintenance, decommissioning, operation or servicing of offshore facilities related, but not limited to, exploration and exploitation of resources by the renewable or hydrocarbon energy sectors, aquaculture, ocean mining or similar activities. 	
66	2.	Regulation XV/2 "General", clarifying that:	Cargo ships
		 wherever in the IP Code a reference is made to passenger ship requirements, the corresponding cargo ship requirements are deemed to be complied with; 	and cargo HSC carrying more than
		 IP shall not be treated or considered as passengers; 	12 IP/
		 wherever in SOLAS Chapter XV, or in the IP Code, the number of IP appears as a parameter, it shall be the aggregate number of IP, special personnel and passengers carried on board, where the number of passengers shall not exceed 12. 	New and existing
	3.	Regulation XV/3 "Application", specifying that the requirements are applicable to:	
		 cargo ships and cargo high-speed craft (HSC), of 500 GT and above, constructed on or after 1 July 2024 which carry more than 12 IP; 	
		- cargo ships and cargo HSC constructed before 1 July 2024, authorized by the Administration to carry more than 12 IP in accordance with the Interim recommendations on the safe carriage of more than 12 IP on board vessels engaged on international voyages (Res. MSC.418(97), shall comply with Reg.s III/1, III/2 (except for paragraph 2.1.7), IV/7 and IV/8 of the IP Code by the first intermediate or renewal survey (cargo ship) by the third periodical or first renewal survey (HSC), whichever occurs first, after 1 July 2024;	
		- cargo ships and cargo HSC, irrespective of date of construction, which prior to the 1 July 2024 have not been authorized by the Administration to carry more than 12 IP based on the Interim recommendations on the safe carriage of more than 12 IP on board vessels engaged on international voyages (Res. MSC.418(97)), shall comply and be certified in accordance with SOLAS Chapter XV and the IP Code prior to the carriage of more than 12 IP on board.	

4. Regulation XV/5 "Requirements", requiring the above-listed cargo	
ships and HSC to:	

- be certified as a cargo ship or cargo HSC in accordance with either SOLAS Ch. I or Ch. VIII or Ch. X, as applicable;
- meet the requirements of the IP Code; and
- in addition to SOLAS or HSC Code, as applicable, be surveyed and certified, in accordance with the IP Code.

2011 ESP CODE

2023 Amendments

The amendments, adopted by Resolution MSC.525(106) on 10 November 2022, introduce – inter alia - the following:

67	_	tighter criteria for the annual examination of water ballast tanks, requiring the examination in case the coating is found to be less than GOOD, instead of POOR, as currently required; annual examination of double-side skin void spaces for bulk carriers exceeding 20 years of age and of 150m in length and upwards if the protective coating is found to be in POOR condition and it is not renewed; and	Oil tankers and bulk carriers/ New and existing
	-	clarification for oil tankers carrying oil in independent tanks not part of ship's hull, to which ESP does not apply.	

IGF CODE (INTERNATIONAL CODE OF SAFETY FOR SHIPS USING GASES OR OTHER LOW-FLASHPOINT FUELS)

2019 Amendments

The amendments, adopted by Resolution MSC.458(101) on 14 June 2019, are applicable to new ships only (i.e. for which the building contract is placed on or after 1 January 2024; or in the absence of a building contract, the keels of which are laid or which are at a similar stage of construction on or after 1 July 2024; or the delivery of which is on or after 1 January 2028) and require – inter alia - the following:

 68 - in cases where the tank insulation and tank location make the probability very small for the tank contents to be heated up due to an external fire, special considerations may be made to allow a higher loading limit than calculated using the reference temperature, but never above 95%. (para. 6.8.3); - where gaseous fuel pipes pass through enclosed spaces in the ship, they shall be protected by a secondary enclosure. This enclosure can be a ventilated duct or a double wall piping system (para. 9.5.4). This is not applicable for fully welded fuel gas vent pipes led through mechanically ventilated spaces (para 9.5.5): 	ing nt on
---	-----------------

 liquefied fuel pipes shall be protected by a secondary enclosure able to contain leakages. This requirement may be waived by the Administration if the piping system is in a fuel preparation room or a tank connection space. Where gas detection is not fit for purpose, the secondary enclosures around liquefied fuel pipes shall be provided with leakage detection by means of pressure or temperature monitoring systems, or any combination thereof (para. 9.5.6); 	
- the exhaust system shall be equipped with explosion relief systems unless designed to accommodate the worst case overpressure due to ignited gas leaks or justified by the safety concept of the engine. A detailed evaluation of the potential for unburnt gas in the exhaust system is to be undertaken covering the complete system from the cylinders up to the open end. This detailed evaluation shall be reflected in the safety concept of the engine (para. 10.3.1.1.1);	
- the space containing the fuel containment system shall be separated from the machinery spaces of category A or other rooms with high fire risks. The separation shall be done by a cofferdam of at least 900 mm with insulation of A-60 class. When determining the insulation of the space containing the fuel containment system from other spaces with lower fire risks, the fuel containment system shall be considered as a machinery space of category A. For type C tanks, the fuel storage hold space may be considered as a cofferdam (para. 11.3.3);	
 the fuel storage hold space may be considered as a cofferdam provided that (para. 11.3.3.1): 	
 the type C tank is not located directly above machinery spaces of category A or other rooms with high fire risk; and 	
 the minimum distance to the A-60 boundary from the outer shell of the type C tank or the boundary of the tank connection space, if any, is not less than 900 mm. 	

IP CODE (INTERNATIONAL CODE OF SAFETY FOR SHIPS CARRYING INDUSTRIAL PERSONNEL)

New Code

The new mandatory Code of safety for ships carrying industrial personnel (IP Code), adopted by Resolution MSC.527(106) on 10 November 2022, includes requirements – additional to those set in SOLAS Convention and HSC Code, as applicable – as follows:

69	The following ships – as per SOLAS Reg. XV/3 "Application":	Cargo ships
	 new cargo ships and cargo HSC (i.e. constructed on or after 1 July 2024) of 500GT and above, engaged on international voyages, carrying more than 12 IP (i.e. "all persons transported or accommodated on board for the purpose of offshore industrial activities performed on board other ships and/or offshore facilities"); 	and cargo HSC carrying more than 12 IP/ New and existing

	 existing cargo ships and cargo HSC (i.e. cons July 2024) of 500GT and above which are not ce prior to 1 July 2024; shall 	tructed before 1 rtified to carry IP	
	 comply with the additional requirements i relevant to the IP competences and their trai their safe transfer (Reg. III/2); the ship's de stability (Reg.s IV/2 and V/2), machinery (Reg and V/4), electrical installations (Reg.s IV/8 safety (Reg.s IV/6 and V/6); life-saving applia and V/7); carriage of dangerous goods (Reg.s 	n the IP Code ning (Reg. III/1); esign in term of 1.s IV/3, IV/4, V/3 5 and V/5); fire nces (Reg.s IV/7 IV/8 and V/8);	
	 carry onboard two additional Certificates: IP S and Record of Equipment. 	Safety Certificate;	
70	 Existing cargo ships and cargo HSC constructed 2024, authorized by the Administration to carry m accordance with the Interim recommendation carriage of more than 12 IP on board vess international voyages (Res. MSC.418(97)), shall 	ed before 1 July ore than 12 IP in is on the safe els engaged on	Cargo ships and cargo HSC carrying more than 12 IP/ Constructed
	 comply with Reg.s III/1, III/2 (except for para. IV/8 of the IP Code by the first intermediate o (cargo) by the third periodical or first renewa whichever occurs first, after 1 July 2024; and 	2.1.7), IV/7 and r renewal survey al survey (HSC),	before 1 July 2024 and not earlier certified to carry 12 IP
	 carry onboard two additional Certificates: IP S and Record of Equipment. 	Safety Certificate;	

MARPOL 73/78

2021 Amendments to Annex I "Regulations for the prevention of pollution by oil"

The amendments, adopted by Resolutions MEPC.329(76) on 17 June 2021, include:

71	new Regulation 43A "Special requirements for the use and carriage of oils as fuel in Arctic waters", banning - on and after 1 July 2024 - the use and carriage in Arctic waters of the oils, other than crude oils, having a density at 15°C higher than 900 kg/m ³ or a kinematic viscosity at 50°C higher than 180 mm ² /s. Ships engaged in securing the safety of ships or in search and rescue operations, and ships dedicated to oil spill preparedness and response, are exempted.	All ships/ New and existing
	A five-year delay in the implementation of such ban (i.e. 1 July 2029) is granted for vessels that already comply with MARPOL Annex I Reg. 12A or with Reg. 1.2.1 of the Polar Code, as these ships have existing fuel tank protections that reduce the risk of fuel oil spills.	

IBC CODE (INTERNATIONAL CODE FOR THE CONSTRUCTION AND EQUIPMENT OF SHIPS CARRYING DANGEROUS CHEMICALS IN BULK)

2022 Amendments

The amendments, adopted by Resolutions MEPC.345(78) and MSC.526(106) modify:

72	Paragraph 2.9.2.1, allowing the use of watertight doors of hinged- type.	Chemical tankers/
		New and
		existing

2025

1 January 2025

SOLAS 1974

2018 Amendments

The amendments adopted by Resolution MSC.436(99) on 24 May 2018, make – inter aliaretroactively applicable the requirements in Regulation II-1/8-1, as follows:

73	Passenger ships of 120m in length or more or at least 3 MVZ, constructed on or after 1 January 2009 but before 1 January 2014 shall have an onboard stability computer, or shore-based support not later than the first renewal survey after 1 January 2025 .	Passenger ships of L≥120m or 3 or more MVZ/ Constructed before 1 January 2014 but on or after 1 January 2009
----	--	---

IMSBC CODE (INTERNATIONAL MARITIME SOLID BULK CARGOES)

2023 Amendments

The amendments adopted by Resolution MSC.539(107) on 8 June 2023 include, inter alia:

74	 Inclusion of definitions for "dynamic separation" and "Cargoes which may undergo dynamic separation"; 	All Ships carrying
	2. Inclusion of "bulk density" both in the list of cargo information in para. 4.2.2, and in the form for cargo information for solid bulk cargoes of provision 4.2.3 of the IMSBC Code (circulated also as annex to MSC.1/Circ.1664, encouraging shippers to use cargo information in accordance with the revised form); and	solid bulk cargoes/ New and existing
	3. Addition of/amendments to the following schedules:	
	 Baryte, flotation chemical grade; 	
	 Brown fused alumina; 	

 Celestine Concentrate; 	
 Celestine; 	
 Crushed granodiorite fines; 	
 Direct reduced iron (D); 	
 Dunite and Dunite Fines; 	
 Electric arc furnace dust, pelletized; 	
 Fish meal (Fish Scrap), Stabilized anti-oxidant treated; 	
 Potassium nitrate; 	
 Sodium nitrate; and 	
 Sodium nitrate and potassium nitrate mixture. 	
IMSBC-related Guidelines were revised according to the above- mentioned amended and issued as follows:	
 MSC.1/Circ.1395/Rev.6 "Lists of solid bulk cargoes for which a fixed gas fire-extinguishing system may be exempted or for which a fixed gas fire-extinguishing system is ineffective"; 	
 MSC.1/Circ.1453/Rev.2 "Guidelines for the submission of information and completion of the format for the properties of cargoes not listed in the IMSBC Code and their conditions of carriage"; 	
 MSC.1/Circ.1454/Rev.2 "Guidelines for developing and approving procedures for sampling, testing and controlling the moisture content for solid bulk cargoes which may liquefy or undergo dynamic separation". 	

MARPOL 73/78

2011 Amendments to the revised Annex VI "Regulations for the prevention of air pollution from ships"

The amendments adopted by Resolution MEPC.203(62), introduce new requirements on energy efficiency for ships, which, inter alia, foresee the following:

75	According to Table 1 of Regulation 21 "Required EEDI", bulk carriers; gas carriers; tankers; container ships; general cargo ships; refrigerated cargo carriers (as defined in MEPC.1/Circ.795/Rev.8); and combination carriers, fall into Phase 3 (1 January 2025 and onwards) for the calculation of the reduction factor X of the required EEDI if, as specified by MEPC.1/Circ.795/Rev.8:	All ships ≥ 400GT other than passenger ships and ro- ro cargo and ro-ro
	 the building contract is placed in Phase 3; or 	passenger ships, not
	 the keel is laid or which is at a similar stage of construction on or after 1 July 2025; or 	having diesel- electric, turbine or
	 the delivery is on or after 1 January 2029. 	hybrid
	If the design of a ship allows it to fall into more than one of the	propulsion systems/

above-listed ship types, the required EEDI for the ship shall be the most stringent (i.e. the lowest).

In Phase 3 (on or after 1 January 2025)

STCW CODE (CODE ON STANDARDS OF TRAINING, CERTIFICATION AND WATCHKEEPING FOR SEAFARERS)

2023 Amendments

The amendments, adopted by Resolution MSC.541(107) on 8 June 2023, modify:

76 Section A-I/2 "Certificates and endorsements", allowing the use of electronic certificates. All ships/ New and existing

STCW CONVENTION (CONVENTION ON STANDARDS OF TRAINING, CERTIFICATION AND WATCHKEEPING FOR SEAFARERES)

2023 Amendments

The amendments, adopted by Resolution MSC.540(107) on 8 June, allow the use of electronic certificates and modify:

77	_	Regulation I/1 "Definitions and clarifications", including in the definition of "original form" also the "electronic form of any certificate";	All ships/ New and existing
	_	Regulation I/2 "Certificates and endorsements", specifying that If an electronic form is used, the minimum required data must be accessible as defined by the Administration in accordance with the STCW Code, which is necessary to initiate a verification procedure. Reference is made to the Guidelines on the use of electronic certificates of seafarers were approved (MSC.1/Circ.1665).	

1 February 2025

BWM CONVENTION (INTERNATIONAL CONVENTION FOR THE CONTROL AND MANAGEMENT OF SHIPS' BALLAST WATER AND SEDIMENTS)

2023 Amendments

The amendments adopted by Resolution MEPC.369(80) on 7 July 2023 modify the following:

78	The Form of Ballast Water Record Book (BWRB) (Appendix II),	All ships/
	deleting the duplication of the information contained in the International	New and
	Ballast Water Management Certificate and reviewing the BWRB items	existing
	to improve clarity on how to record the operation of the ship.	
	The related "Guidance on matters relating to ballast water record- keeping and reporting" has been approved and issued as	

1 May 2025

MARPOL 73/78

2022 Amendments to Annex VI "Regulations for the prevention of air pollution from ships"

The amendments adopted by Resolution MEPC.361(79) on 16 December 2022 entered into force on 1 May 2024 modify the following:

79	Regulation 14 "Sulphur oxides (SOx) and particulate matter",	All ships/
	designating the Mediterranean Sea as a new Emission Control Area	New and
	for Sulphur oxides (Med SO _X ECA) effective from 1 May 2025. The	existing
	coordinates of the area are included in new para. 4 of Appendix VII	_
	"Emission control areas (Reg.s 13.6 and 14.3)".	

26 June 2025

HONG KONG INTERNATIONAL CONVENTION FOR THE SAFE AND ENVIRONMENTALLY SOUND RECYCLING OF SHIPS, 2009

New convention

The Hong Kong Convention was adopted at a Diplomatic Conference held in Hong Kong, China, in May 2009 and with the deposit of instruments of accession by the People's Republic of Bangladesh and the Republic of Liberia on 26 June 2023, the conditions for the entry into force were fulfilled. The Convention includes – inter alia - the following:

	1.	Article 1 "Definitions", defining – inter alia:	NA
		 "Ship" as a vessel of any type whatsoever operating or having operated in the marine environment and includes submersibles, floating craft, floating platforms, self-elevating platforms, Floating Storage Units (FSUs), and Floating Production Storage and Offloading Units (FPSOs), including a vessel stripped of equipment or being towed; 	
		 "Ship Recycling Facility" as a defined area that is a site, yard or facility used for the recycling of ships. 	
80	2.	Article 3 "Application", specifying that the Convention applies to	All ships ≥
		 all ships as defined above entitled to fly the flag of a Party of 500GT and above; 	New and existing
		 all the Ship Recycling Facilities (SRF) operating under its jurisdiction; 	
		with the exclusion of	
		 warships, naval auxiliary, or other ships owned or operated by a Party and used, for the time being, only on government non-commercial service; 	
		ships operating throughout their life only inside the waters subject to the sovereignty or jurisdiction of the State whose flag the ship is entitled to fly.	
	3.	Regulation 5 "Inventory of Hazardous Materials", requiring new ship to have onboard an Inventory of Hazardous Materials verified either by the Administration or by any person or organization authorized by it, taking into account 2023 Guidelines for the Development of the Inventory of Hazardous Materials adopted by Resolution MEPC.379(80) on 7 July 2023.	
		New ship is defined as a ship:	
		 for which the building contract is placed on or after 26 June 2025; or 	
		- in the absence of a building contract, the keel of which is laid	

or which is at a similar stage of construction on or after 26 December 2025; or - the delivery of which is on or after 26 December 2027. The inventory is made up by three parts: Part I, listing the hazardous materials contained in ship's structure and equipment, their location and approximate quantities; Part II for operationally generated wastes (to be prepared prior to recycling); - Part III for stores (to be prepared prior to recycling). Part I of the Inventory shall be developed at design and construction stage and shall identify the hazardous materials listed in Appendixes 1 and 2 to the Convention, their location and approximate quantities. Prior to recycling the Inventory shall, in addition to the properly maintained and updated Part I, incorporate Part II for operationally generated wastes, and Part III for stores. Existing ships shall comply with this requirement not later than 26 June 2030, or before going for recycling if this is earlier. The Hazardous Materials listed in Appendix 1, at least, shall be identified when the Inventory is developed. For existing ships a plan shall be prepared describing the visual/sampling check by which the Inventory of Hazardous Materials is developed, taking into account the 2023 Guidelines for the Development of the Inventory of Hazardous Materials adopted by Resolution MEPC.379(80) on 7 July 2023. 4. Regulation 9 "Ship Recycling Plan", requiring SRF to develop a ship-specific Ship Recycling Plan prior to any recycling of a ship, taking into account the 2011 Guidelines for the development of the Ship Recycling Plan, adopted by Resolution MEPC.196(62) on 15 July 2011. 5. Regulation 11 "Issuance and endorsement of certificates", requiring ships - to which the Convention applies - to have two different certificates: the International Certificate on Inventory of Hazardous Materials, issued either by the Administration or by any organization authorized by it after successful completion of an initial or renewal survey and certifying that Part I of the Inventory complies with the applicable requirements of the Convention; and the Ready for Recycling Certificate, prior to any recycling activity taking place, issued either by the Administration or by any organization authorized by it, after successful completion of a final survey. The International Ready for Recycling Certificate shall be issued for a period specified by the Party that shall not exceed 3 months. Reference should be made to the 2012 Guidelines for the survey and certification of ships under the Hong Kong Convention adopted by Resolution MEPC.222(64) on 5

26 June 2025

October 2012; and 2012 Guidelines for the inspection of ships under the Hong Kong Convention, adopted by Resolution MEPC.223(64).	
6. Regulation 16 "Authorization of Ship Recycling Facilities", requiring SRF to be authorized by a Party taking into account the 2012 Guidelines for the authorization of ship recycling facilities adopted by Resolution MEPC.211(63) on 2 March 2012. The authorization shall be valid for a period specified by the Party but not exceeding five years.	NA Applicable to SRF
7. Regulation 18 "Ship Recycling Facility Plan" (SRFP), requiring SRF to have a SRFP adopted by the board or the appropriate governing body of the Recycling Company. Such plan shall be developed and maintained taking into account 2012 Guidelines for safe and environmentally sound ship recycling", adopted by Resolution MEPC.210(63) on 2 March 2012.	

26 December 2025

HONG KONG INTERNATIONAL CONVENTION FOR THE SAFE AND ENVIRONMENTALLY SOUND RECYCLING OF SHIPS, 2009

New convention

The Hong Kong Convention - in force from 26 June 2025 (see **New convention – 26 June 2025**) - requires:

81	New ship - defined as a ship:	All ships ≥
	 for which the building contract is placed on or after 26 June 2025; or 	500 GT / Keel laid on or after 26
	 in the absence of a building contract, the keel of which is laid or which is at a similar stage of construction on or after 26 December 2025; or 	Dec. 2025
	 the delivery of which is on or after 26 December 2027. 	
	to have onboard an Inventory of Hazardous Materials verified either by the Administration or by any person or organization authorized by it, taking into account 2023 Guidelines for the Development of the Inventory of Hazardous Materials adopted by Basedution MERC 370(80) on 7 July 2023	
	Resolution MEPC.379(80) on 7 July 2023.	

2026

1 January 2026

SOLAS 1974

2022 Amendments

The amendments adopted by Resolutions MSC.520(106) on 10 November 2022 modify Regulation II-2/4 "Probability of ignition", requiring:

		A 11 1 1 /
82	 all ships (i.e. new and existing, including those constructed before 	All ships/
	1 July 2012) to be provided prior to bunkering with a declaration	New and
	signed and certified by the oil fuel supplier's representative, that	existing
	the oil fuel to be supplied has a flashpoint not less than 60°C as	
	required by SOLAS Reg II-2/4.2.1 and the test method used for	
	determining the flashpoint. A bunker delivery note for the oil fuel	
	delivered to the ship shall contain either the flashpoint specified in	
	accordance with standards acceptable to the IMO (e.g. ISO	
	2710:2016) or a statement that the flashpoint has been	
	2719.2010 , of a statement that the hashpoint has been measured at an above 70° ; and	
	measured at or above 70, and	
	 Administrations to report all confirmed cases (flashpoint) where oil 	
	fuel suppliers have failed to meet SOLAS flashpoint requirements	
	(i.e. flashpoint as measured resulted to be below 60°C).	

2023 Amendments

The amendments adopted by Resolution MSC.532(107) on 8 June 2023 include the following:

1. Amendments to Regulation II-1/2 "Definitions", adding:	NA
 "Lifting appliance" defined as any load-handling ship's equipment: 	
 used for cargo loading, transfer, or discharge; 	
 used for raising and lowering hold hatch covers or moveable bulkheads; 	
 used as engine-room cranes; 	
 used as stores cranes; 	
 used as hose handling cranes; 	
 used for launch and recovery of tender boats and similar applications; and 	
 used as personnel handling cranes. 	

	 "Anchor handling winch" defined as any winch for the purpose of deploying, recovering and repositioning anchors and mooring lines in subsea operations. 	
	 "Loose gear" defines as an article of ships equipment by means of which a load can be attached to a lifting appliance or an anchor handling winch but which does not form an integral part of the appliance or load. 	
	 "installed on or after 1 January 2026" to be read as: 	
	 for ships the keel of which is laid or which is at a similar stage of construction on or after 1 January 2026, any installation date on the ship; or 	
	 for ships other than those above, including those constructed before 1 January 2009, a contractual delivery date for lifting appliance or anchor handling winches, or in the absence of a contractual delivery date, the actual delivery date of the lifting appliance or anchor handling winches to the ship on or after 1 January 2026. 	
83	2. new Regulation II-1/3-13 "Lifting appliances and anchor handling winches", applicable to lifting appliances and anchor handling winches, and loose gear utilized with the lifting appliances and the anchor handling winches; except for	All ships/ New and existing
	 lifting appliances on ships certified as MODUs; 	
	 lifting appliances used on offshore construction ships, such as pipe/cable laying/repair or offshore installation vessels, including ships for decommissioning work, which comply with standards acceptable to the Administration; 	
	 integrated mechanical equipment for opening and closing hold hatch covers; and 	
	 life-saving launching appliances complying with the LSA Code. 	
	Existing lifting appliances with valid certificates of test and thorough examination under another international instrument (e.g. ILO Convention No.152) acceptable to the Administration and issued prior 1 January 2026 , will be considered compliant.	
	The new Regulation requires:	
	 Lifting appliances installed on or after 1 January 2026 (refere to the definition above) shall be: 	
	 designed, constructed and installed in accordance with the requirements of a classification society which is recognized by the Administration in accordance with the provisions of Reg. XI-1/1 or standards acceptable to the Administration which provide an equivalent level of safety; and 	
	 load tested and thoroughly examined after installation and before being taken into use for the first time and after repairs, modifications or alterations of major character; and 	
	 permanently marked and provided with documentary evidence for the safe working load (SWL). 	

	 Lifting appliances installed before 1 January 2026 shall be tested and thoroughly examined, based on the Guidelines for lifting appliances (MSC.1/Circ.1663); be permanently marked and provided with documentary evidence for the SWL no later than the date of the first renewal survey on or after 1 January 2026; 	
	 Anchor handling winches installed on or after 1 January 2026 shall be designed, constructed, installed and tested to the satisfaction of the Administration, based on the Guidelines for anchor handling winches (MSC.1/Circ.1662). 	
	 Anchor handling winches installed before 1 January 2026 shall be tested and thoroughly examined, based on the based on the Guidelines for anchor handling winches (MSC.1/Circ.1662) no later than the date of the first renewal survey on or after 1 January 2026. 	
	 All lifting appliances and anchor handling winches, regardless of installation date, and all loose gear utilized with any lifting appliances and anchor handling winches, shall be operationally tested, thoroughly examined, inspected, operated and maintained, based on the Guidelines for lifting appliances (MSC.1/Circ.1663) and the Guidelines for anchor handling winches (MSC.1/Circ.1662). 	
	Regulation II-2/10 "Fire fighting", prohibiting the use or storage of extinguishing media containing perfluorooctane sulfonic acid (PFOS) on new ships (i.e. constructed on or after 1 January 2026). Existing ships shall comply with the requirements not later the first survey on or after 1 January 2026 . Such substances are to be delivered to appropriate shore-based reception facilities	
84	3. Amendments to Regulation V/19 "Carriage requirements for shipborne navigational systems and equipment", requiring containerships and bulk carriers of 3.000GT and above, constructed on or after 1 January 2026 , to be fitted with an electronic inclinometer, or other means, to determine, display and record the ship's roll motion. For the purpose of Chapter V:	Bulk carriers and Containership ≥ 3000GT/ Constructed on or after 1 Jan. 2026
	 Bulk carrier is a bulk carrier as defined in Reg. XII/1.1; and Containership is defined as a ship which is intended primarily to carry containers. 	
	In light of the above, it has been clarified that the requirement does not apply to cargo ships occasionally carrying cargoes in bulk and general cargo ships carrying containers on deck.	
85	 Amendments to Ch. XIV "Safety measures for ships operating in polar waters", requiring new (i.e. constructed on or after 1 January 2026) 	Fishing vessels of L ≥24m,
	 fishing vessels of 24 m in length overall and above, 	pleasure yachts of
	 pleasure yachts of 300 GT and above not engaged in trade, and 	≥300GT and cargo ship 300≤GT<500/
	 cargo ships of 300 GT and above but below 500 GT 	Constructed
	performing voyages in the Antarctic area and voyages in Arctic	on or after 1

1 January 2026

	waters beyond the outer limit of the territorial sea of the Contracting Government whose flag the ship is entitled to fly, to comply with the newly introduced provisions of the Polar Code relevant to safety of navigation (new Ch. 9-1) and voyage planning (new Ch. 11-1) (see 2023 Amendments – 1 January 2026).	Jan. 2026
	The above-listed ships constructed before 1 January 2026 are required to comply with the new requirements by 1 January 2027.	
86	5. Amendments to the following Forms to align the "Details of life- saving appliances" to the expression used in the LSA Code regarding the type of immersion suits.:	All ships/ New and existing
	 Record of the Equipment for Cargo Ship Safety (Form C) 	
	 Record of Equipment for Cargo Ship Safety (Form E) 	
	 Record of Equipment for Passenger Ship Safety (Form P) 	
	6. Amendments to the following Forms to add "containership" in the list of the ship type and a new entry "Electronic inclinometer" in the "details of navigational systems and equipment", in line with the requirements described in item 4 above	
	 Form of Safety Equipment Certificate for Cargo Ships 	
	 Form of Safety Certificate for Nuclear Cargo Ships 	
	 Record of Equipment for Cargo Ship Safety (Form E) 	
	 Record of the Equipment for Cargo Ship Safety (Form C). 	

SOLAS PROTOCOL 1978

2022 Amendments

The amendments, adopted by Resolution MSC.522(106) on 10 November 2022, modify the following:

87	the Form of the Cargo Ship Safety Equipment Certificate to bring in	All ships/
	line with the SOLAS amendments due to the modernization of the	New and
	GMDSS (see 2022 Amendments – 1 January 2024).	existing

2023 Amendments

The amendments, adopted by Resolution MSC.533(107) on 8 June 2023, modify the following:

88	the Form of the Safety Equipment Certificate for Cargo Ships to	All ships/
	include "containership" in the list of the type of ships in line with the	New and
	adopted SOLAS carriage requirements in Regulation V/19 relevant	existing
	to the inclinometer (see 2023 Amendments - 1 January 2026).	

SOLAS PROTOCOL 1988

2023 Amendments

The amendments, adopted by Resolution MSC.534(107) on 8 June 2023, modify the following:

89 the Forms of the Safety Equipment Certificate for Cargo Ships and the Safety Certificate for Cargo Ships to include "containership" in the list of the type of ships in line with the adopted SOLAS carriage requirements in Regulation V/19 relevant to the inclinometer (see 2023 Amendments – 1 January 2026).

1944 HSC CODE (INTERNATIONAL CODE OF SAFETY FOR HIGH-SPEED CRAFT)

2023 Amendments

The amendments, adopted by Resolution MSC.536(107) on 8 June 2023, introduce the following - in line with SOLAS Regulation II-2/10, as modified by Res. MSC.532(107) (see **2023 Amendments - 1 January 2026**):

90	 prohibition of the use or storage of extinguishing media containing perfluorooctane sulfonic acid (PFOS) on all craft not later than the first survey after 1 January 2026; 	HSC/ Constructed before 1 July 2002
	 obligation to deliver PFOS to appropriate shore-based reception facilities when removed; and 	
	 modifications to the Form of the Record of Equipment for High- Speed Craft Safety Certificate to align the "Details of life-saving appliances" to the expression used in the LSA Code regarding the type of immersion suits and anti-exposure suits. 	

2000 HSC CODE (INTERNATIONAL CODE OF SAFETY FOR HIGH-SPEED CRAFT)

2023 Amendments

The amendments, adopted by Resolution MSC.537(107) on 8 June 2023, introduce the following - in line with SOLAS Regulation II-2/10, as modified by Res. MSC.532(107) (see **2023 Amendments - 1 January 2026**):

91	 prohibition of the use or storage of extinguishing media containing PFOS on new craft (i.e. constructed on or after 1 January 2026) and on existing craft, not later than the first survey after 1 January 2026; 	HSC/ New and existing
	 obligation to deliver PFOS to appropriate shore-based reception facilities when removed; and 	

1 January 2026

 modifications to the Forms of the Record of Equipment to align the "Details of life-saving appliances" to the expression used in the LSA Code regarding the type of immersion suits and antiexposure suits.

IGC CODE (INTERNATIONAL CODE FOR THE CONSTRUCTION AND EQUIPMENT OF SHIPS CARRYING LIQUEFIED GASES IN BULK)

2022 Amendments

The amendments, adopted by Resolution MSC.523(106) on 10 November 2022, modify the following:

92	Tables 6.3 "Plates, sections and forgings for cargo tanks, secondary	Gas
	barriers and process pressure vessels for design temperatures	carriers/
	below -55°C and down to -165°C" to allow the use of high	New and
	manganese austenitic steels and make reference to the revised	existing
	guidelines on the application of high manganese austenitic steel for	_
	cryogenic service (MSC.1/Circ.1599/Rev.2).	

IGF CODE (INTERNATIONAL CODE OF SAFETY FOR SHIPS USING GASES OR OTHER LOW-FLASHPOINT FUELS)

2022 Amendments

The amendments, adopted by Resolution MSC.524(106) on 10 November 2022, modify the following:

93	Tables 7.3 "Plates, sections and forgings for fuel tanks, secondary	All ships/
	barriers and process pressure vessels for design temperatures	New and
	below -55°C and down to -165°C" to allow the use of high	existing
	manganese austenitic steels and make reference to the revised	
	guidelines on the application of high manganese austenitic steel for	
	cryogenic service (MSC.1/Circ.1599/Rev.2).	

LSA CODE (INTERNATIONAL LIFE SAVING APPLIANCE)

2023 Amendments

The amendments, adopted by Resolution MSC.535(107) on 8 June	NA
2023, introduce new ventilation requirements for totally enclosed	
lifeboats (para.s 4.6.6 and 4.6.7) installed on or after 1 January 2029	
(see 2023 Amendments – 1 January 2029).	

POLAR CODE (INTERNATIONAL CODE FOR SHIPS OPERATING IN POLAR WATERS)

2023 Amendments

The amendments, adopted by Resolution MSC.538(107) on 8 June 2023 require:

94	 fishing vessels of 24 m in length overall and above, 	Fishing
	 pleasure yachts of 300 GT and above not engaged in trade, and 	≥24m,
	 cargo ships of 300 GT and above but below 500 GT 	pleasure
	constructed on or after 1 January 2026 and performing voyages in the Antarctic area and voyages in Arctic waters beyond the outer limit of the territorial sea of the Contracting Government whose flag the ship is entitled to fly, to comply with	2300GT and cargo ship 300≤GT<500/ Constructed on or after 1 January 2026
	1. new Chapter 9-1,"Safety of navigation for fishing vessels of 24 metres in length overall and above, pleasure yachts of 300 gross tonnage and upwards not engaged in trade and cargo ships of 300 gross tonnage and upwards but below 500 gross tonnage" introducing new provisions for the nautical information; the navigational equipment functionality; and the requirements for ship to have the ability to visually detect ice when operating in darkness;	
	2. new Chapter 11-1 "Voyage planning for fishing vessels of 24 metres in length overall and above, pleasure yachts of 300 gross tonnage and upwards not engaged in trade and cargo ships of 300 gross tonnage and upwards but below 500 gross tonnage", including requirements for the voyage plan, specifying that the master shall consider the potential hazards of the intended voyage.	
	The above-listed ships constructed before 1 January 2026 are required to comply with the new requirements by 1 January 2027.	

1 January 2027

SOLAS 1974

2020 Amendments

Resolution MSC.474(102) on 11 November 2020, introduce amendments to Chapter II-1 (see **2020 Amendments – 1 January 2024**) requiring, inter alia:

95	ships of 3.000GT and above delivered on or after 1 January 2027 to be fitted with mooring arrangement and mooring equipment including lines able to ensure occupational safety and safe mooring of the ship, based on the Guidelines on the design of mooring arrangements and the selection of appropriate mooring equipment and fittings for safe mooring (MSC.1/Circ.1619).	All ships/ Delivered on or after 1 January 2027
	Ship-specific information shall be provided and kept on board (reference should be made to section 5 of MSC.1/Circ.1175/Rev.1).	

2023 Amendments

The amendments adopted by Resolution MSC.532(107) on 8 June 2023 include retroactive requirements as follows:

96	Ch. XIV "Safety measures for ships operating in polar waters", requires existing (i.e. constructed before 1 January 2026):	Fishing vessels of L
	 fishing vessels of 24 m in length overall and above, 	≥24m, pleasure
	 pleasure yachts of 300 GT and above not engaged in trade, and 	yachts of ≥300GT and
	 cargo ships of 300 GT and above but below 500 GT 	cargo ship 300≤GT<500/
	operating in polar waters to comply by 1 January 2027 with the newly introduced provisions of the Polar Code relevant to safety of navigation (new Ch. 9-1) and voyage planning (new Ch. 11-1) (see 2023 Amendments – 1 January 2026).	Constructed before 1 January 2026

POLAR CODE (INTERNATIONAL CODE FOR SHIPS OPERATING IN POLAR WATERS)

2023 Amendments

The amendments, adopted by Resolution MSC.538(107) on 8 June 2023 require:

97	 fishing vessels of 24 m in length overall and above 	Fishing
	 pleasure yachts of 300 GT and above not engaged in trade, and 	vessels of L≥24m,
	 cargo ships of 300 GT and above but below 500 GT 	pleasure
	constructed before 1 January 2026 and performing voyages in the Antarctic area and voyages in Arctic waters beyond the outer limit of the territorial sea of the Contracting Government whose flag the ship is entitled to fly, to comply by 1 January 2027 with:	vessels of 300GT and above and cargo ships of 300≤GT<500/ Constructed before 1 January 2026
	1. new Chapter 9-1,"Safety of navigation for fishing vessels of 24 metres in length overall and above, pleasure yachts of 300 gross tonnage and upwards not engaged in trade and cargo ships of 300 gross tonnage and upwards but below 500 gross tonnage" introducing new provisions for the nautical information; the navigational equipment functionality; and the requirements for ship to have the ability to visually detect ice when operating in darkness;	
	2. new Chapter 11-1 "Voyage planning for fishing vessels of 24 metres in length overall and above, pleasure yachts of 300 gross tonnage and upwards not engaged in trade and cargo ships of 300 gross tonnage and upwards but below 500 gross tonnage", including requirements for the voyage plan, specifying that the master shall consider the potential hazards of the intended voyage.	

26 December 2027

HONG KONG INTERNATIONAL CONVENTION FOR THE SAFE AND ENVIRONMENTALLY SOUND RECYCLING OF SHIPS, 2009

New convention

The Hong Kong Convention - in force from 26 June 2025 (see **New convention – 26 June 2025**) - requires:

98	New ship - defined as a ship:	All ships ≥
	 for which the building contract is placed on or after 26 June 2025; or 	500 GT / Delivered on or after 26
	 in the absence of a building contract, the keel of which is laid or which is at a similar stage of construction on or after 26 December 2025; or 	December 2027
	 the delivery of which is on or after 26 December 2027. 	
	to have onboard an Inventory of Hazardous Materials verified either by the Administration or by any person or organization authorized by it, taking into account 2023 Guidelines for the Development of the Inventory of Hazardous Materials adopted by Resolution MEPC.379(80) on 07 July 2023.	

1 January 2028

SOLAS 1974

2020 Amendments

Resolution MSC.474(102) on 11 November 2020, introduce amendments to Chapter II-1 (see **2020 Amendments – 1 January 2024**) and include, inter alia, the following modifications applicable to ships delivered on or after **1 January 2028**:

99	 Regulation II-1/7-2 "Calculation of the factor si", clarifying that for passenger ships the factor si is to be taken as zero if, taking into account sinkage, heel and trim, it occurs that in any intermediate stage or in the final stage of flooding, the immersion of the lower edge of openings through which progressive flooding may take place and such flooding is not accounted for in the calculation of factor si. Such openings shall include air pipes, ventilators and openings which are closed by means of weathertight doors or hatch covers. In applying the new subdivision and damage stability requirements reference should be made to the Revised Explanatory Notes adopted by Res. MSC.429(98)/Rev.2. 	Passenger ships/ Delivered on or after 1 January 2028
100	 Regulation II-1/12 "Peak and machinery space bulkheads, shaft tunnels, etc.", allowing the use any type of valve at the collision bulkhead (e.g. screw-down, butterfly). 	All ships/ Delivered on or after 1 January 2028
101	 Regulation II-1/13 "Openings in watertight boundaries below the bulkhead deck in passenger ships", clarifying – inter alia – the requirements of the safety centre and the central operating control, including its location. 	Passenger ships/ Delivered on or after 1 January 2028
102	4. Regulation II-1/15 "Openings in the shell plating below the bulkhead deck of passenger ships and the freeboard deck of cargo ships", requiring cargo ports and other similar openings (e.g. gangway and fuelling ports) in the side of ships below the bulkhead deck of passenger ships and the freeboard deck of cargo ships to be fitted with doors so designed as to ensure the same watertightness and structural integrity as the surrounding shell plating. Unless otherwise granted by the Administration, these openings shall open outwards. The number of such openings shall be the minimum compatible with the design and proper working of the ship. In no case shall these openings be so	All ships/ Delivered on or after 1 January 2028

	fitted as to have their lowest point below the deepest subdivision draught.	
103	 Regulation II-1/17 " Internal watertight integrity of passenger ships above the bulkhead deck", requiring 	Passenger ships/
	- the internal watertight subdivision arrangements to limit the entry and spread of water above the bulkhead deck to be in accordance with the design arrangements necessary for compliance with the stability requirements. Where pipes, scuppers, electric cables, etc. are carried through internal watertight boundaries that are immersed at any intermediate or final stage of flooding in damage cases that contribute to the attained subdivision index A, arrangements shall be made to ensure their watertight integrity; and	Jenvered on or after 1 January 2028
	doors in internal watertight subdivision arrangements above the bulkhead deck, and also above the worst intermediate or final stage of flooding waterlines, to be capable of preventing the passage of water when immersed in the required range of positive stability for any damage cases contributing to the attained subdivision index A. These doors may remain open provided they can be remotely closed from the navigation bridge. They shall always be ready to be immediately closed.	
	6. Regulation II-1/19 "Damage control information", requiring passenger ships delivered on or after 1 January 2028 to which regulation II-1/8-1.3 applies, to include in the damage control information a reference to activation of damage stability support from the onboard stability computer, if installed, and to shore-based support when provided	
104	7. Regulation II-1/22 "Prevention and control of water ingress, etc.", requiring gangway, cargo and fuelling ports fitted below the bulkhead deck of passenger ships and the freeboard deck of cargo ships and all watertight hatches to be effectively closed and secured watertight before the voyage commences, and be kept closed during navigation. However, the master may permit a watertight hatch to be opened during navigation for a limited period of time sufficient to permit passage or for access. It shall then be closed.	All ships/ Delivered on or after 1 January 2028

IGF CODE (INTERNATIONAL CODE OF SAFETY FOR SHIPS USING GASES OR OTHER LOW-FLASHPOINT FUELS)

2019 Amendments

The amendments, adopted by Resolution MSC.458(101) on 14 June 2019, are applicable to new ships only (i.e. for which the building contract is placed on or after 1 January 2024; or in the absence of a building contract, the keels of which are laid or which are at a similar stage of construction on or after 1 July 2024; or the delivery of which is on or after 1 January 2028) and require – inter alia - the following:

105	- in cases where the tank insulation and tank location make the	Ships using
	probability very small for the tank contents to be heated up due to	low-

1 January 2028

an external fire, special considerations may be made to allow a higher loading limit than calculated using the reference temperature, but never above 95%. (para. 6.8.3);	flashpoint fuels/ Delivered on or after 1 January 2028
 where gaseous fuel pipes pass through enclosed spaces in the ship, they shall be protected by a secondary enclosure. This enclosure can be a ventilated duct or a double wall piping system (para. 9.5.4). This is not applicable for fully welded fuel gas vent pipes led through mechanically ventilated spaces (para. 9.5.5); 	
 liquefied fuel pipes shall be protected by a secondary enclosure able to contain leakages. This requirement may be waived by the Administration if the piping system is in a fuel preparation room or a tank connection space. Where gas detection is not fit for purpose, the secondary enclosures around liquefied fuel pipes shall be provided with leakage detection by means of pressure or temperature monitoring systems, or any combination thereof (para. 9.5.6); 	
- the exhaust system shall be equipped with explosion relief systems unless designed to accommodate the worst case overpressure due to ignited gas leaks or justified by the safety concept of the engine. A detailed evaluation of the potential for unburnt gas in the exhaust system is to be undertaken covering the complete system from the cylinders up to the open end. This detailed evaluation shall be reflected in the safety concept of the engine (para. 10.3.1.1.1).	
- the space containing the fuel containment system shall be separated from the machinery spaces of category A or other rooms with high fire risks. The separation shall be done by a cofferdam of at least 900 mm with insulation of A-60 class. When determining the insulation of the space containing the fuel containment system from other spaces with lower fire risks, the fuel containment system shall be considered as a machinery space of category A. For type C tanks, the fuel storage hold space may be considered as a cofferdam (para. 11.3.3)	
 the fuel storage hold space may be considered as a cofferdam provided that (para. 11.3.3.1): 	
 the type C tank is not located directly above machinery spaces of category A or other rooms with high fire risk; and 	
 the minimum distance to the A-60 boundary from the outer shell of the type C tank or the boundary of the tank connection space, if any, is not less than 900 mm. 	

1 January 2029

LSA CODE (INTERNATIONAL LIFE SAVING APPLIANCE)

2023 Amendments

The amendments, adopted by Resolution MSC.535(107) on 8 June 2023, introduce new ventilation requirements for totally enclosed lifeboats (para.s 4.6.6 and 4.6.7) as follows:

106	totally enclosed lifeboats installed on or after 1 January 2029 , meaning:	All ships/ New and
	 for ships for which the building contract is placed on or after 1 January 2029, or in the absence of the contract, constructed on or after 1 January 2029, any installation date on the ship; or 	existing
	 for ships other than those ships above, a contractual delivery date for the equipment or, in the absence of a contractual delivery date, the actual delivery date of the equipment to the ship on or after 1 January 2029 	
	shall be provided with means of ventilation which:	
	 achieve a ventilation rate of at least 5 m³/h per person for the number of persons which the lifeboat is permitted to accommodate and for a period of not less than 24 hours; 	
	 are operable from inside the lifeboat and arranged so that there is no stratification or formation of unventilated pockets; 	
	 have a source of power different from the radio batteries, if electrically powered, or be provided with sufficient fuel if powered by the lifeboat engine; 	
	 have opening provided with mean of closing, operable from inside and able to be kept closed before and during the launching of the lifeboat; and 	
	 have inlet and outlet openings located and designed to minimize the ingress of water through the openings, without using the means of closing required. 	
	Specific requirements for the openings and their means of closing are provided based on the type of totally enclosed lifeboat (i.e. free- fall lifeboat; lifeboat with a self-contained air support system; and fire-protected lifeboat).	
	Consequent amendments to the "Revised recommendation on testing of life-saving appliances (Res. MSC.81(70))" were adopted by Res. MSC.544(107) on 8 June 2023, and the "Revised	

1 January 2029

standardized life-saving appliance evaluation and test report forms	
(survival craft)" (MSC.1/Circ.1630/Rev.2) approved.	

1 July 2029

MARPOL 73/78

2021 Amendments to Annex I "Regulations for the prevention of pollution by oil"

107	The amendments, adopted by Resolutions MEPC.329(76), introduce	All ships/
	new Regulation 43A banning – on or after 1 July 2024 - the use and	New and
	carriage in Arctic waters of the oils, other than crude oils, having a	existing
	density at 15°C higher than 900 kg/m3 or a kinematic viscosity at	
	50°C higher than 180 mm ² /s.	
	However, vessels compliant with MARPOL Annex I Reg. 12A or with	
	Reg. 1.2.1 of the Polar Code shall comply with such ban on or after 1	
	July 2029.	

26 June 2030

HONG KONG INTERNATIONAL CONVENTION FOR THE SAFE AND ENVIRONMENTALLY SOUND RECYCLING OF SHIPS, 2009

New convention

The Hong Kong Convention - in force from 26 June 2025 (see **New convention – 26 June 2025**) - requires:

108	Existing ships to have onboard an "Inventory of Hazardous	All ships ≥
	Materials" (Regulation 5) - verified either by the Administration or	500 GT /
	by any person or organization authorized by it - not later than 26	Contracted
	June 2030, or before going for recycling if this is earlier. The	before 26
	Hazardous Materials listed in Appendix 1, at least, shall be	June 2025
	identified when the Inventory is developed. For existing ships a	
	plan shall be prepared describing the visual/sampling check by	
	which the Inventory of Hazardous Materials is developed, taking	
	into account the 2023 Guidelines for the Development of the	
	Inventory of Hazardous Materials adopted by Resolution	
	MEPC.379(80) on 7 July 2023.	

PART 2

MANDATORY REQUIREMENTS WITH ENTRY INTO FORCE DATE PENDING

CSC 1972 (INTERNATIONAL CONVENTION FOR SAFE CONTAINERS)

1993 Amendments

A	The 1972 Convention for Safe Containers has two goals. One is to maintain a high level of safety of human life in the transport and handling of containers by providing generally acceptable test procedures and related strength requirements. The other is to facilitate the international transport of containers by providing uniform international safety Regulations, equally applicable to all modes of surface transport. In this way, proliferation of divergent national safety Regulations can be avoided.	Container ships, general cargo ships, ro-ro cargo ships and cargo high speed craft/
	The requirements of the Convention apply to the great majority of freight containers used internationally, except those designed especially for carriage by air. As it was not intended that all containers or reusable packing boxes should be affected, the scope of the Convention is limited to containers of a prescribed minimum size having corner fittings - devices which permit handling, securing or stacking.	New and existing
	These amendments, adopted on 4 November 1993 by the IMO Assembly through Resolution A.737(18), will enter into force one year after their acceptance by two thirds of the Contracting Parties in accordance with paragraph 2(c) of Article IX of the Convention. They mainly concern definitions and the inclusion in the Convention of the International System of Units (SI).	
	When the CSC amendments which introduce the SI units enter into force, SOLAS Regulation VI/5 should be amended accordingly.	
	Revised recommendations on harmonized interpretation and implementation of the CSC Convention were circulated by CSC.1/Circ.138 and CSC.1/Circ.138/Rev.1 (and its Corrigendum), which supersedes CSC/Circ.100, CSC/Circ.123, CSC/Circ.124, CSC/Circ.134 and CSC/Circ.137.	

SFV-P 1977 (TORREMOLINOS INTERNATIONAL CONVENTION FOR THE SAFETY OF FISHING VESSELS)

1993 Protocol to the Convention

В	A Protocol to the 1977 Torremolinos International Convention for the Safety of Fishing Vessels was adopted on 2 April 1993, at an International Conference on the Safety of Fishing Vessels held in Torremolinos, Spain.	Fishing vessels L ≥ 24 m/ New and existing
	The Protocol was needed because the original treaty has never entered into force and in the meantime has become outdated. The Protocol updates the Convention, takes into account recent	

technological evolution and eliminates the provisions incorporated in the present Convention which have made it difficult for States to bring it into force.

The Protocol applies to fishing vessels of 24 m in length and over, including those vessels that also process their catch: however, some chapters, or part of them, apply to lengths of 45 or 60 m and over (machinery and electrical installations, fire protection, life-saving appliances and radiocommunications). Some requirements, like radiocommunications and safety of navigation apply both to New and existing vessels.

An important innovation is contained in Art. 3(5) which allows regional arrangements to be made to establish harmonised requirements for vessels which are 24 m in length and over but which are below the length of application of Chapters IV, V, VII and IX.

The Protocol will enter into force one year after being ratified by 15 States with at least an aggregate fleet of 14,000 vessels, which is approximately equivalent to 50 per cent of today's world fishing fleet of 24 m in length and over.
